A Scientific Search for Altruism C. Daniel Batson, 2018-10-19 For centuries the egoism altruism debate has echoed through Western thought Egoism says that the motivation for everything we do including our seemingly selfless acts of care for others is to gain one or another self benefit Altruism while not denying the force of self interest says that under certain circumstances we can care for others for their sakes not our own Over the past half century social psychologists have turned to laboratory experiments on humans to provide a scientific resolution of this debate about our nature The experiments have focused on the possibility that empathic concern other oriented emotion elicited by and congruent with the perceived welfare of someone in need produces altruistic motivation to remove that need With carefully constructed experimental designs these scientists have tested the nature of the motivation produced by empathic concern determining whether it is egoistic or altruistic and thereby providing an answer to a fundamental question about what makes us tick Framed as a detective story this book traces the scientific search for altruism through numerous studies and attempts to examine various motivational suspects reaching the improbable conclusion that empathy induced altruism is indeed part of our nature The book then considers the implications of this conclusion both for our understanding of who we are as humans the bad news as well as the good and for how we might create a more humane society

Gravity's Shadow Harry Collins, 2010-08-15 According to the theory of relativity we are constantly bathed in gravitational

radiation When stars explode or collide a portion of their mass becomes energy that disturbs the very fabric of the space time continuum like ripples in a pond But proving the existence of these waves has been difficult the cosmic shudders are so weak that only the most sensitive instruments can be expected to observe them directly Fifteen times during the last thirty years scientists have claimed to have detected gravitational waves but so far none of those claims have survived the scrutiny of the scientific community Gravity's Shadow chronicles the forty year effort to detect gravitational waves while exploring the meaning of scientific knowledge and the nature of expertise Gravitational wave detection involves recording the collisions explosions and trembling of stars and black holes by evaluating the smallest changes ever measured Because gravitational waves are so faint their detection will come not in an exuberant moment of discovery but through a chain of inference for forty years scientists have debated whether there is anything to detect and whether it has yet been detected Sociologist Harry Collins has been tracking the progress of this research since 1972 interviewing key scientists and delineating the social process of the science of gravitational waves Engagingly written and authoritatively comprehensive Gravity's Shadow explores the people institutions and government organizations involved in the detection of gravitational waves This sociological history will prove essential not only to sociologists and historians of science but to scientists themselves

Hot Talk, Cold Science S. Fred Singer, David R. Legates, Anthony R. Lupo, 2021-01-18 The revised and expanded third edition of Hot Talk Cold Science forms the capstone of the distinguished astrophysicist Dr S Fred Singer's lucid yet hard scientific look at climate change And the book is no less explosive than its predecessors and certainly never more timely Singer explores the inaccuracies in historical climate data and the failures of climate models as well as the impact of solar variability clouds ocean currents and sea levels on global climate plus factors that could mitigate any human impact on world climate Singer's masterful analysis decisively shows that the pessimistic and often alarming global warming scenarios depicted in the media have no scientific basis In fact he finds that many aspects of increased levels of CO₂ as well as any modest warming such as a longer growing seasons for food and a reduced need to use fossil fuels for heating would have a highly positive impact on the human race As alarmists clamor to impose draconian government restrictions on entire populations in order to combat climate change this book reveals some other startling stubborn contradictory facts including CO₂ has not caused temperatures or sea levels to rise beyond historical rates Severe storms have not increased in frequency or intensity since 1970 neither have heat waves nor droughts Global climate change is not harming coral reefs Any increases in CO₂ concentrations across huge time spans haven't preceded rising global temperatures they've followed them by about

600 to 800 years just the opposite of alarmist claims Carbon taxes and other solutions to the global warming crisis would have severe consequences for economically disadvantaged groups and nations Alarmist climate scientists have hidden their raw temperature data and deleted emails then undermined the peer review system to squelch debate In sum despite all the hot talk and outright duplicity there is no climate crisis resulting from human activities and no such threat on the horizon
