## **Seas Oceans Understanding Geography Series:**

**Seas & Oceans** Felicity Brooks,1994-01-01 Describes the world s seas and oceans their effect on the land and the climate the creatures that live in them and the ways in which humans use and abuse them **Seas** JoAnn Early

Macken,2006 This book explains how seawater moves and discusses the different plants and animals that live in seas

Living with the Sea Mike Brown,Kimberley Peters,2018-10-03 The seas and oceans are currently taking centre stage in academic study and public consciousness From the plastics littering our seas to the role of climate change on ocean currents from unequal access of marine resources to the treacherous experiences of seafarers who keep our global economy afloat now is a crucial time to examine how we live with the sea This ambitious book brings together an interdisciplinary and international cohort of contributors from within and beyond academia It offers a range and diversity of insights unlike previous collections An oceanic turn is taking place with a burgeoning of academic work that takes seriously the place of seas and oceans in understanding socio cultural and political life past and present Yet there is a significant gap concerning the ways in which we engage with seas and oceans with a will to enliven action and evoke change This book explores these challenges offering insights from spatial planning architectural design geography educational studies anthropology and cultural studies An examination through these lenses can help us to better understand human relationships with the seas and oceans and promote an ethic of care for the future **World Seas: An Environmental Evaluation** Jean-Francois

Hamel,2018-08-24 World Seas An Environmental Evaluation Second Edition Volume One Europe The Americas and West Africa provides a comprehensive review of the environmental condition of the seas of Europe the Americas and West Africa Each chapter is written by experts in the field who provide historical overviews in environmental terms current environmental status major problems arising from human use informed comments on major trends problems and successes and recommendations for the future The book is an invaluable worldwide reference source for students and researchers who are concerned with marine environmental science fisheries oceanography and engineering and coastal zone development Covers regional issues that help countries find solutions to environmental decline that may have already developed elsewhere Provides scientific reviews of regional issues thus empowering managers and policymakers to make progress in under resourced countries and regions Includes comprehensive maps and updated statistics in each region covered **Sea**

**Narratives: Cultural Responses to the Sea, 1600-Present** Charlotte Mathieson,2016-06-07 Sea Narratives Cultural Responses to the Sea 1600 Present explores the relationship between the sea and culture from the early modern period to the present The collection uses the concept of the sea narrative as a lens through which to consider the multiple ways in which the sea has shaped challenged and expanded modes of cultural representation to produce varied contested and provocative chronicles of the sea across a variety of cultural forms within diverse socio cultural moments Sea Narratives provides a unique perspective on the relationship between the sea and cultural production it reveals the sea to be more than

simply a source of creative inspiration instead showing how the sea has had a demonstrable effect on new modes and forms of narration across the cultural sphere and in turn how these forms have been essential in shaping socio cultural understandings of the sea The result is an incisive exploration of the sea s force as a cultural presence *Empire in the Western Ocean* Lo Jung-pang,2023-03-01 In this ground breaking posthumous study the late Lo Jung pang discusses the geographic political and commercial factors that led to the emergence of seapower and a navy under the Ming While Zheng He and his seven expeditions have received some scholarly attention few understand the long history of maritime engagement which provided the nautical and technical background for these voyages The evolution of this maritime engagement and its extension into the Indian Ocean is the focus of Lo s still timely and highly significant work In addition to detailing the rise of the Ming navy and its extraordinary accomplishments Lo also examines some of the factors that led to the end of China s first great maritime era Why did China suddenly seem to turn away from the seas Were the military defeats in Annam and on the northern borders significant in this Or were financial pressures key *Empire in the Western Ocean* represents the most comprehensive and insightful English language treatment to date of the evolution and activities of the early Ming navy Moreover it encourages further inquiry into contemporary questions of China s maritime aspirations To aid the reader a Foreword by Richard J Smith discusses how Lo viewed the early Ming navy not simply in terms of its evolution and military strength but also in terms of the commerce and shipping that it promoted This history is presented in the context of the centuries long shift of China s demographic center of gravity from the northwest to the southeast by the Song period 960 1279 In the Afterword Ming scholar Geoff Wade explains how the Ming rulers eager to widely display their legitimacy sent military forces abroad collected treasure for the imperial court and urged rulers of all known states to demonstrate their submission to the Ming court He also shows how this often gave rise to violence during the Ming expeditions *The Aral Sea Basin* Philip Micklin,William D. Williams,2013-04-18 The Aral Sea Basin which is located in the central Asian part of the former Soviet Union is undergoing dramatically rapid and intense environmental change Pervasive human misuse and overuse of its water land and other critical natural resources have led to severe degradation of key ecological systems This book analyses the environmental human and economic problems that have arisen and presents recommendations for future research needs Primary focus is on the drying of the Aral Sea but related issues of diminished river flow land and water pollution and degradation ecosystem deterioration and adverse effects on humans are also examined *Routledge Handbook of National and Regional Ocean Policies* Biliana Cicin-Sain,David Vanderzwaag,Miriam C. Balgos,2015-05-15 This comprehensive handbook prepared by leading ocean policy academics and practitioners from around the world presents in depth analyses of the experiences of fifteen developed and developing nations and four key regions of the world that have taken concrete steps toward cross cutting and integrated national and regional ocean policy All chapters follow a common framework for policy analysis While most coastal nations of the world already have a variety of sectoral

policies in place to manage different uses of the ocean such as shipping fishing oil and gas development in the last two decades the coastal nations covered in the book have undertaken concerted efforts to articulate and implement an integrated ecosystem based vision for the governance of ocean areas under their jurisdiction This includes goals and procedures to harmonize existing uses and laws to foster sustainable development of ocean areas to protect biodiversity and vulnerable resources and ecosystems and to coordinate the actions of the many government agencies that are typically involved in oceans affairs The book highlights the serious conflicts of use in most national ocean zones and the varying attempts by nations to follow the prescriptions emanating from the 1982 UN Law of the Sea Convention and the outcomes of the 1992 2002 and 2012 sustainable development summits The interrelationship among uses and processes in the coast and ocean requires that ocean governance be integrated precautionary and anticipatory Overall the book provides a definitive state of the art review and analysis of national and regional ocean policies around the world The Sea, Volume 14B: the Global Coastal Ocean Allan R. Robinson, Kenneth H. Brink, 2006 In multidisciplinary efforts to understand and manage our planet contemporary ocean science plays an essential role Volumes 13 and 14 of The Sea focus on two of the most important components in the field of ocean science today the coastal ocean and its interactions with the deep sea and coupled physical biogeochemical and ecosystem dynamics **Life in the World's Oceans** Alasdair McIntyre, 2010-11-18 Life in the World's Oceans Diversity Abundance and Distribution is a true landmark publication Comprising the synthesis and analysis of the results of the Census of Marine Life this most important book brings together the work of around 2000 scientists from 80 nations around the globe The book is broadly divided into four sections covering oceans past oceans present oceans future and a final section covering the utilisation of the data which has been gathered and the coordination and communication of the results Edited by Professor Alasdair McIntyre Marine Life is a book which should find a place on the shelves of all marine scientists ecologists conservation biologists oceanographers fisheries scientists and environmental biologists All universities and research establishments where biological earth and fisheries science are studied and taught should have copies of this essential book on their shelves A true landmark publication One of the most important marine science books ever published Contributions from many world leading researchers Synthesis of a huge amount of important data Represents the culmination of 10 years research by 2000 scientists from 80 countries *Marine Geography* Barbara Bischof, 2025-02-06 Marine Geography Ocean Space and Sense of Place offers an innovative and comprehensive exploration of ocean spaces through the lens of geographic thought establishing marine geography as a unique subdiscipline It addresses the historical neglect of oceans in geography providing core theories and approaches that can be applied to address geographic issues unique to this space such as fisheries blue economies coastal development and management mobilities and shipping and maritime governance Expanding traditional geographic concepts and incorporating the more than human elements inherent to this space this work tweaks ways that geographic analysis can be applied to ocean systems in meaningful ways This book

explores mapping techniques and lays out the physical dynamics and scientific models that provide the contextual realities with which we engage these complex environments and explores how our land based perspectives shape our interactions with the marine world It assembles the innovative theoretical geographical frameworks being applied to address ocean spaces and provides the building blocks for establishing an ocean point of view Filled with practical examples and foundational theories this book serves as a vital resource for students researchers and anyone interested in bridging the gap between marine science and geography Offers ways to define ocean geographies from within contexts of ocean systems rather than a view from land that is simply extended seaward Establishes a strategy to adapt or reframe core theories in both human and physical geography and proposes a start to a formal subdiscipline of marine and coastal geography Provides a picture of geographic features unique to ocean systems and lays the foundation for a distinct geography of marine spaces with which to confront issues in oceans natural resource management marine science and exploration communication and trade boundaries governance etc

**On the Ocean** Barry Cunliffe, 2017-09-29 For humans the sea is and always has been an alien environment Ever moving and ever changing in mood it is a place without time in contrast to the land which is fixed and scarred by human activity giving it a visible history While the land is familiar even reassuring the sea is unknown and threatening By taking to the sea humans put themselves at its mercy It has often been perceived to be an alien power teasing and cajoling The sea may give but it takes Why then did humans become seafarers Part of the answer is that we are conditioned by our genetics to be acquisitive animals we like to acquire rare materials and we are eager for esoteric knowledge and society rewards us well for both Looking out to sea most will be curious as to what is out there a mysterious island perhaps but what lies beyond Our innate inquisitiveness drives us to explore Barry Cunliffe looks at the development of seafaring on the Mediterranean and the Atlantic two contrasting seas the Mediterranean without a significant tide enclosed and soon to become familiar the Atlantic with its frightening tidal ranges an ocean without end We begin with the Middle Palaeolithic hunter gatherers in the eastern Mediterranean building simple vessels to make their remarkable crossing to Crete and we end in the early years of the sixteenth century with sailors from Spain Portugal and England establishing the limits of the ocean from Labrador to Patagonia The message is that the contest between humans and the sea has been a driving force perhaps the driving force in human history
