**Competition and Efficiency in International Food Supply Chains** John Williams, 2012 Why have food crises seemingly become more frequent in recent years compared to the last few decades This book examines an array of different issues and distortions that are causing food supply chain dysfunction in many countries particularly for staple non perishable foods such as grains oilseeds pulses and sugar It outlines the underlying changes that are currently occurring which will have an influence on the direction of future food supply chains and provides some solutions to current food security problems Based on an analysis of total regulation in the 1950s 60s through to deregulation during the 1980 90s as well as post deregulation it focuses on liberal trade and deregulation as a more successful solution to creating efficiencies in food supply chains and distribution The author highlights a common thread of either farmers using government for vested interest intervention or autocratic governments seeking market and supply chain power The book examines the role of government after 70 years of food supply chain intervention It discusses

the role of commercial trade markets and cluster industries and how these can quickly disintegrate when price distortions occur. The author studies both food importing and exporting countries and concludes that comingled commoditization of food has led to increased hoarding, corruption, and dependence on food aid. He argues that a competitive food supply chain that has minimum intervention is more likely to provide future food security. In conclusion, the book emphasizes that adequate rewards, competition, and striving for supply chain efficiencies are the essences of sustainable food security.

**Commodity Risk Management** Geoffrey Poitras, 2013. *Commodity Risk Management* goes beyond just an introductory treatment of derivative securities, dealing with more advanced topics and approaching the subject matter from a unique perspective. At its core lies the concept that commodity risk management decisions require an in-depth understanding of speculative strategies and vice versa. The book offers readers a unified treatment of important concepts and techniques that are useful in applying derivative securities in the management of risk in commodity markets. While some of these techniques are well known and fairly common, Poitras offers applications to specific situations and links to speculative trading strategies, extensions of the material that not only are hard to come by but helpful to both the academic and the practitioner. The book is divided into three parts. The first part deals with the general framework for commodity risk management; the second part focuses on the use of derivative security contracts in commodity risk management; and the third part deals with applications to three specific situations. As a textbook, this book is designed to appeal to classes at a senior undergraduate, MBA, MA level of training in Finance, financial economics, actuarial science, management science, agricultural economics, and accounting. There will also be interest for the book as a monograph for research libraries, a handbook for individuals working in the commodity risk management industry, and a guidebook for those in the general public interested in topics like farm risk management or the assessment of hedging practices of publicly traded commodity producers.
