Multilevel Design A Guide With An Annotated Bibliography 1980 1993:

The Multilevel Design Harry Jm Huttner, Pieter van den Eeden, 1995-01-30 In the social sciences phenomena tend to be hierarchically structured so that individuals belong to groups and groups belong to larger organizations and societies Multilevel research stresses this hierarchical structure of social life and necessarily assumes the existence of a particular organization of the procedures of investigation This organization which is fundamental to the research is called a research design Because the research is hierarchical it uses a multilevel design This book provides a detailed overview of the theoretical and methodological aspects of multilevel research based on the multilevel definition of social structure Six chapters discuss the foundations of multilevel research and the applications of its research in the social sciences An annotated bibliography follows which is divided into eight sections on theoretical and methodological issues and on applications of multilevel research Included are books and articles published from 1980 through 1993 Models for Intensive Longitudinal Data Theodore A. Walls, Joseph L. Schafer, 2006-01-19 Rapid technological advances in devices used for data collection have led to the emergence of a new class of longitudinal data intensive longitudinal data ILD Behavioral scientific studies now frequently utilize handheld computers beepers web interfaces and other technological tools for collecting many more data points over time than previously possible Other protocols such as those used in fMRI and monitoring of public safety also produce ILD hence the statistical models in this volume are applicable to a range of data The volume features state of the art statistical modeling strategies developed by leading statisticians and methodologists working on ILD in conjunction with behavioral scientists Chapters present applications from across the behavioral and health sciences including coverage of substantive topics such as stress smoking cessation alcohol use traffic patterns educational performance and intimacy Models for Intensive Longitudinal Data MILD is designed for those who want to learn about advanced statistical models for intensive longitudinal data and for those with an interest in selecting and applying a given model The chapters highlight issues of general concern in modeling these kinds of data such as a focus on regulatory systems issues of curve registration variable frequency and spacing of measurements complex multivariate patterns of change and multiple independent series The extraordinary breadth of coverage makes this an indispensable reference for principal investigators designing new studies that will introduce ILD applied statisticians working on related models and methodologists graduate students and applied analysts working in a range of fields A companion Web site at www.oup.com/us/MILD contains program examples and documentation Multilevel Analysis Joop J. Hox, Mirjam Moerbeek, Rens van de Schoot, 2010-09-13 This practical introduction helps readers apply multilevel techniques to their research Noted as an accessible introduction the book also includes advanced extensions making it useful as both an introduction and as a reference to students researchers and methodologists Basic models and examples are discussed in non technical terms with an emphasis on understanding the methodological and statistical issues involved in using these models The estimation and

interpretation of multilevel models is demonstrated using realistic examples from various disciplines For example readers will find data sets on stress in hospitals GPA scores survey responses street safety epilepsy divorce and sociometric scores to name a few The data sets are available on the website in SPSS HLM MLwiN LISREL and or Mplus files Readers are introduced to both the multilevel regression model and multilevel structural models Highlights of the second edition include Two new chapters one on multilevel models for ordinal and count data Ch 7 and another on multilevel survival analysis Ch 8 Thoroughly updated chapters on multilevel structural equation modeling that reflect the enormous technical progress of the last few years The addition of some simpler examples to help the novice whilst the more complex examples that combine more than one problem have been retained A new section on multivariate meta analysis Ch 11 Expanded discussions of covariance structures across time and analyzing longitudinal data where no trend is expected Expanded chapter on the logistic model for dichotomous data and proportions with new estimation methods An updated website at <http://www.joophox.net> with data sets for all the text examples and up to date screen shots and PowerPoint slides for instructors Ideal for introductory courses on multilevel modeling and or ones that introduce this topic in some detail taught in a variety of disciplines including psychology education sociology the health sciences and business The advanced extensions also make this a favorite resource for researchers and methodologists in these disciplines A basic understanding of ANOVA and multiple regression is assumed The section on multilevel structural equation models assumes a basic understanding of SEM

Latent Variable and Latent Structure Models George A. Marcoulides, Irini Moustaki, 2014-04-04 This edited volume features cutting edge topics from the leading researchers in the areas of latent variable modeling Content highlights include coverage of approaches dealing with missing values semi parametric estimation robust analysis hierarchical data factor scores multi group analysis and model testing New methodological topics are illustrated with real applications The material presented brings together two traditions psychometrics and structural equation modeling Latent Variable and Latent Structure Models thought provoking chapters from the leading researchers in the area will help to stimulate ideas for further research for many years to come This volume will be of interest to researchers and practitioners from a wide variety of disciplines including biology business economics education medicine psychology sociology and other social and behavioral sciences A working knowledge of basic multivariate statistics and measurement theory is assumed **Multilevel Analysis** Tom A B Snijders, Roel J Bosker, 2011-10-30 The Second Edition of this classic text introduces the main methods techniques and issues involved in carrying out multilevel modeling and analysis Snijders and Bosker's book is an applied authoritative and accessible introduction to the topic providing readers with a clear conceptual and practical understanding of all the main issues involved in designing multilevel studies and conducting multilevel analysis This book provides step by step coverage of multilevel theories ecological fallacies the hierarchical linear model testing and model specification heteroscedasticity study designs longitudinal data multivariate multilevel models discrete dependent variables There are also new chapters on

missing data multilevel modeling and survey weights Bayesian and MCMC estimation and latent class models This book has been comprehensively revised and updated since the last edition and now discusses modeling using HLM MLwiN SAS Stata including GLLAMM R SPSS Mplus WinBugs Latent Gold and SuperMix This is a must have text for any student teacher or researcher with an interest in conducting or understanding multilevel analysis Tom A B Snijders is Professor of Statistics in the Social Sciences at the University of Oxford and Professor of Statistics and Methodology at the University of Groningen Roel J Bosker is Professor of Education and Director of GION Groningen Institute for Educational Research at the University of Groningen

ANOVA and ANCOVA Andrew Rutherford, 2012-08-29 Provides an in depth treatment of ANOVA and ANCOVA techniques from a linear model perspective ANOVA and ANCOVA A GLM Approach provides a contemporary look at the general linear model GLM approach to the analysis of variance ANOVA of one and two factor psychological experiments With its organized and comprehensive presentation the book successfully guides readers through conventional statistical concepts and how to interpret them in GLM terms treating the main single and multi factor designs as they relate to ANOVA and ANCOVA The book begins with a brief history of the separate development of ANOVA and regression analyses and then goes on to demonstrate how both analyses are incorporated into the understanding of GLMs This new edition now explains specific and multiple comparisons of experimental conditions before and after the Omnibus ANOVA and describes the estimation of effect sizes and power analyses leading to the determination of appropriate sample sizes for experiments to be conducted Topics that have been expanded upon and added include Discussion of optimal experimental designs Different approaches to carrying out the simple effect analyses and pairwise comparisons with a focus on related and repeated measure analyses The issue of inflated Type 1 error due to multiple hypotheses testing Worked examples of Shaffer's R test which accommodates logical relations amongst hypotheses ANOVA and ANCOVA A GLM Approach Second Edition is an excellent book for courses on linear modeling at the graduate level It is also a suitable reference for researchers and practitioners in the fields of psychology and the biomedical and social sciences
