

ORGANOCHROMIUM COMPOUNDS

- Chromium(II) reagents are powerful one electron reducing agents

- Cr(II) readily inserts into allyl-, alkenyl-, alkynyl-, propargyl- and aryl halides and sulfonates under aprotic conditions, giving rise to the corresponding organochromium(III) reagents
- Traces of nickel salts exert a catalytic effect on the formation of the C-Cr(III) bond

Watts, 2012-06-19 The only book series to summarize the latest progress on organic reaction mechanisms Organic Reaction Mechanisms 1994 surveys the development in understanding of the main classes of organic reaction mechanisms reported in the primary scientific literature in 1994 The 30th annual volume in this highly successful series highlights mechanisms of stereo specific reactions Reviews are compiled by a team of experienced editors and authors allowing advanced undergraduates graduate students postdocs and chemists to rely on the volume's continuing quality of selection and presentation [Comprehensive Organometallic Analysis](#) T.R.

Crompton, 2012-12-06 It is now some sixteen years since the author's first series of books on the analysis of organometallic compounds Many developments in the subject have occurred since that time and a new book on the subject is now overdue The present book aims to provide a comprehensive review of the subject It covers not only all aspects of the analysis of organometallic compounds but also contains two additional chapters dealing with environmental analysis and the use of chelates of metals in the determination of very low concentrations of organic metals Whilst reviewing the literature for the present book it was observed that whereas papers published prior to 1973 dealt almost exclusively with various forms of analysis a high proportion of those published during the past ten years were concerned with the application of proven or newly developed methods to the determination of organometallic compounds in environmental samples such as water air soil river and ocean sediments fish life and biota samples An increasing range of elements including mercury lead arsenic tin antimony selenium and manganese are now being found in organically bound forms in the environment some resulting from pollution others formed in nature by bacterial processes As many of these substances have appreciable implications to human and animal health and the ecosystem as a whole it was considered that it would be timely to include a separate chapter in the book devoted entirely to this subject **Metallurgical Coatings and Thin Films 1990** B.D. Sartwell, 2012-12-02

Metallurgical Coatings and Thin Films 1990 presents the Proceedings of the 17th International Conference on Metallurgical Coatings and 8th International Conference on Thin Films held in San Diego California on April 2-6 1990 It contains 219 papers covering a wide range of topics related to metallurgical coatings and thin films including high temperature coatings hard coatings diamond films tribology and ion beam modification Organized into 99 chapters this volume begins with a

discussion of a thermochemical model for diamond growth from the vapor phase and an experiment in large area diamond coating using a combustion flame torch in its traversing mode It then explores the properties of diamond films preparation of diamond like carbon films using various ion beam assisted techniques deposition of diamond like films by laser ablation and coating of cubic BN films on different substrates The book examines surface processes and rate determining steps in plasma induced chemical vapor deposition and addition of rare earths to improve scale adherence on heat resisting alloys and coatings The reader is introduced to high temperature wear and clearance control coatings thermal barrier coatings and corrosion resistant coatings The book also discusses modification of coatings surfaces to reduce friction the mechanics of the tribology of thin films systems mechanochemical interactions in the tribological behavior of materials analysis and micromechanical testing of tribological coatings surface modification using directed ion beams and industrial equipment and processes This book is a valuable resource for students and researchers interested in metallurgical coatings and thin films

Additions to C-X π -Bonds Barry M. Trost, 1992-09-08 Volume 1 provides a detailed survey of reactions that entail the 1 2 addition of nonstabilized carbanion equivalents of carbonyl imino and thiocarbonyl functionality Emphasis has been placed on those reagents that result in highly selective addition reactions Methods are reported to select for example one carbonyl group over another in the same molecule or to add preferentially a fragment to one enantiotopic or diastereotopic face of a carbonyl group Processes that result from an initial addition to the C X functional group for example alkenations and rearrangements are also covered in this volume **Library of Congress Subject Headings** Library of Congress, 1991
