

Traumatic Brain Injury (TBI): Pediatric Causes and Prevention Strategies

TBI is an injury caused by a blow, jolt, or penetrating object that disrupts normal functioning of the brain.

CDC reports that more than 2.8 million U.S. people sustain a TBI each year; of those, more than 55,000 die and more than 280,000 are hospitalized.¹

TBI can be mild to severe.

Severe TBI can lead to permanent disability and even death.

75% of brain injuries are mild (not life-threatening). Concussion is a type of mild TBI.²

All types of TBI can seriously affect a child's daily life.

Brain injury can cause problems with speaking or understanding, movement or mobility, thinking or memory, and personality or mood.

Causes

The leading causes of TBI in the United States are¹

Falls

About half of brain injuries in children are caused by falls from objects like stairs and bicycles.

Unintentional blunt trauma

28%

of brain injuries in children are caused by being hit in the head with an object, like a baseball or soccer ball.

Motor vehicle crashes

Car accidents are the #1 cause of TBI-related death in children older than age 5.

Homicide

Homicide is the #1 cause of TBI-related death in children age 4 and younger.

Prevention Strategies

Take the following actions to **reduce the risk of TBI in children.**

Use a child safety seat or a seat belt when the child is in a motor vehicle.

Make sure the child wears a helmet when riding a bicycle, skateboarding, and playing sports like hockey and football.

Install window guards and stair safety gates at home.

Avoid shaking your baby. Learn how to prevent shaken baby syndrome.³
