Peer-to-Peer Video Eli M. Noam, Lorenzo Maria Pupillo, 2008-09-05 Peer to Peer P2P networks are comprised of equal nodes that function as both clients and servers as opposed to systems in which data and information are managed through centralized servers The implications of this architecture go far beyond the technological realm the ability of individuals to share digital content files including audio and video material in real time facilitates communication and at a deeper cultural level promotes community without hierarchy or strict control As Eli Noam Lorenzo Pupillo and their colleagues demonstrate in this timely and incisive volume P2P has permeated all facets of society from YouTube and music downloading experiments on college campuses to international policy debates over intellectual property rights Peer to Peer Video is the first book to apply economic principles to analyze and understand the P2P phenomenon considering such topics as consumer demand and the commons and file sharing and the copyright crisis Moreover the authors who include scholars consultants and industry executives provide numerous contemporary examples from the U S and around the world to shed light on the implications of P2P as a mass medium considering such issues as pricing licensing security and regulation The result is provocative commentary on a slice of popular culture that will interest scholars and students policymakers media industry professionals and general readers alike

Peer-to-Peer Data Management Karl Aberer, 2011-03-02 This lecture introduces systematically into the problem of managing large data collections in peer to peer systems Search over large datasets has always been a key problem in peer to peer systems and the peer to peer paradigm has incited novel directions in the field of data management This resulted in many novel peer to peer data management concepts and algorithms for supporting data management tasks in a wider sense including data integration document management and text retrieval The lecture covers four different types of peer to peer data management systems that are characterized by the

type of data they manage and the search capabilities they support The first type are structured peer to peer data management systems which support structured query capabilities for standard data models The second type are peer to peer data integration systems for querying of heterogeneous databases without requiring a common global schema The third type are peer to peer document retrieval systems that enable document search based both on the textual content and the document structure Finally we introduce semantic overlay networks which support similarity search on information represented in hierarchically organized and multi dimensional semantic spaces Topics that go beyond data representation and search are summarized at the end of the lecture Table of Contents Introduction Structured Peer to Peer Databases Peer to peer Data Integration Peer to peer Retrieval Semantic Overlay Networks Conclusion *Peer Evaluation and Selection Systems* Serge Lehky,2011 Humans tend to judge each other often spontaneously and effortlessly but also formally and deliberately The author argues that this process of peer evaluation or peer review developed as a result of natural selection and offers adaptive benefits to individuals and communities However the peer review process is also stochastic is based on assumptions and relies on surrogate measures of success As a result particular instances of peer review may be non adaptive or maladaptive Another limitation of peer review is that it is useless in the face of novelty Although peer review in a broad sense is critical to the success of human societies the meaning of peer review is often overly simplified and misunderstood its results overvalued and its outcomes misinterpreted causing much turmoil and frustration The individuals who participate in a peer review process especially those rejected by peers as well as organizations that utilize peer review for decision making will benefit from the insights proposed in this book Data Management in Grid and Peer-to-Peer Systems Abdelkader Hameurlain,2008-08-18 This book constitutes the refereed proceedings of the First International Conference on Data Management in Grid and Peer to Peer Systems Globe 2008 held in Turin Italy in September 2008 P2P and grid computing are important for scale distributed systems and applications that require effective management of voluminous distributed and heterogeneous data The 10 revised full papers presented were carefully reviewed and selected from 23 submissions The papers are organized in topical sections on P2P storage systems and caching P2P data integration systems querying in grid and P2P systems **Peer Mediation, Program Guide** Fred Schrupf,Donna K.
