Preparative Chromatography Of Fine Chemicals And Pharmaceutical Agents:

Preparative Chromatography H. Schmidt-Traub, 2006-03-06 This interdisciplinary approach combines the chemistry and engineering involved to describe the conception and improvement of chromatographic processes The book covers recent developments in preparative chromatographic processes for the separation of smaller molecules using standard laboratory equipment as well as the detailed conception of industrial chemical plants Following an introductory section on the history of chromatography the current state of research and the design of chromatographic processes the book goes on to define the general terminology There then follow sections on solid materials and packed columns process concepts Final chapters on modeling and determination of model parameters the design and optimization of preparative chromatographic processes and chromatographic reactors allow for the optimum selection of chromatographic systems Essential for chemists and engineers working in the chemicals and pharmaceutical industries as well as for food technologies due to the interdisciplinary nature of these processes

Integrated Reaction and Separation Operations Henner Schmidt-Traub, Andrzej Gorak, 2007-12-29 Economic needs as well as ecological demands are major driving forces in improving chemical processes and plants To meet these goals processes have to be intensified in order to get products of higher quality to increase yield by reducing or even suppressing by products and to minimise energy consumption A preferred principle for such intensifications is process tegration especially integration of reaction and separation operations Scientific research in this field has been boosted by certain extremely successful examples like the Eastman Kodak process for methyl acetate or the MTBE process which are milestones for this method In 2002 the German Research Foundation defined process integration as one of the major search topics for the next decade In 1998 the Department of Biochemical and Chemical Engineering at the University of Dortmund decided to pool its activities for concerted efforts in process integration and to form a joint research cluster Our interest was to find out the general challenges as well as obstacles of integrated processes and to work out methods for their design and valuation Soon it became clear that theoretical work only cannot give reasonable answers

Biotechnology Jose A. Teixeira, Antonio A. Vicente, 2013-08-29 Food biotechnology's typical developments and applications have occurred in the fields of genetics and in enzyme and cell based biological processes with the goal of producing and improving food ingredients and foods themselves. While these developments and applications are usually well reported in terms of the underlying science, there is a clear lack of information on the engineering aspects of such biotechnology based food processes. Filling this gap, *Engineering Aspects of Food Biotechnology* provides a comprehensive review of those aspects from the development of food processes and products to the most important unit operations implied in food biotechnological processes, also including food quality control and waste management. The book focuses on the use of biotechnology for the production of ingredients to be used in the food industry. It addresses two relevant issues: consumer's awareness of the relation between nutrition and good health and the importance of environmental sustainability in the food chain; the production of polymers and in vitro meat. A chapter on the application of process analytical technology highlights the importance of this tool for satisfying the increasingly sophisticated and strict policies for quality control and monitoring of specific process phases. The book includes a detailed presentation of relevant unit operations developed to extract/purify the ingredients of biotechnological origin intended for food applications. In addition to examining the contributions of biotechnology to producing and improving food ingredients, the book provides a concise description of the role biotechnology plays in adding value to food processing by products including post harvest losses in relevant industries of the food sector. It builds a foundation for further research and development in the food processing industry.
