

Chap. III : LA STRUCTURE INTERNE DU GLOBE ET LES MOUVEMENTS ASSOCIÉS

Activité 1 : comparer la carte des séismes et du volcanisme.

Les volcans et les séismes sont répartis dans les mêmes zones géographiques à la surface de la Terre. Ces zones relativement étroites sont dites zones actives car il y a des changements continuels dans ces zones.

Zone active du globe : surface étroite marquée par une forte activité sismique et volcanique.

Zone stable du globe : vaste surface du globe « tranquille », pas ou peu active. Elle peut être totalement océanique ou comporter à la fois une partie océanique et une partie continentale.

Les limites des zones stables ne correspondent pas toujours aux limites des continents. Le long de la côte ouest de l'Amérique du sud la limite de la zone stable correspond à la limite du continent alors que sur la côte est ce n'est pas le cas.

L'étude de la répartition des séismes et des volcans permet de localiser des frontières « actives », délimitant une douzaine de zones « stables » à la surface du globe: **les plaques tectoniques**.

Sciences De La Terre Iii Tectonique 1:

Les Sciences de la terre aux XVIIe et XVIIIe siècles Gabriel Gohau, 2014-04-01 Chacun sait que la science n'a eu d'autre but du XVIIe siècle lorsque Kepler, Galilée et Descartes notamment découvrent les bases de l'astronomie et de la mécanique. Pourtant les sciences de la vie et de la terre ne suivent pas le mouvement. Malgré les efforts d'exploration et de classification du monde vivant et du domaine minéral, ces disciplines ne prendront leur essor qu'au début du XIXe siècle. Ce travail, comme celui de Guyot, se situe donc dans l'entre-deux des révolutions scientifiques. Notre souhait finalement sera que le lecteur prenne assez de goût ces lectures pour les prolonger en allant aux auteurs cités dans les bibliothèques chez les bouquinistes ou dans les conditions modernes qui se multiplient et qui, sans avoir le charme des livres anciens, sont un moyen commode et bon marché d'accéder au fonds de notre littérature scientifique des siècles passés.

Tectonics Evgenii Sharkov, 2012-07-18 This book is devoted to different aspects of tectonic researches, especially to modern geodynamic processes. Syntheses of recent and earlier works combined with new results and interpretations are presented here for diverse tectonic settings. Most of chapters include up-to-date materials of detailed geological geophysical investigations which can help more clearly understand the essence of mechanisms of different tectonic processes. Among general problems of tectonics are discussed processes in axes of slow spreading mid-ocean ridges, on example of central part of Mid-Atlantic Ridge, and in continental collision zones. Formation of sedimentary basins are considered on examples of Niger Delta, Triassic Cuyana Basin, Argentina, and Mesozoic and Cenozoic basins of the Alpine margin, Tunisia. Neotectonic processes examined in Turkey and Morocco. Tectonic evolution of the southern margin of Laurasia in the Paleozoic is discussed as well as interrelation of western Troms-Lofoten and the Lewisian complexes in the Middle Paleoproterozoic.
