Sciences Were Never At War:

National Military Establishments and the Advancement of Science and Technology P. Forman, José M. Sánchez-Ron, 2001-11-30 To some philosophers seeking to understand the human condition technology is a necessary guide But to think through the complex human phenomenon of technology we must tackle philosophy of science philosophy of culture moral issues comparative civilizational studies and the economics of specific industrial and military technologies in their historical contexts The philosopher wants to grasp the technological factor in this troubled world even as we see it is only one factor and that it does not speak openly for itself Put directly our human troubles to a considerable extent have been transformed exaggerated distorted even degraded perhaps transcended by what engineers and scientists entrepreneurs and politicians have wrought But our problems are ancient problems of dominations struggles survival values in conflict greed and insane sadisms To get some conceptual light on the social reality which seems immediately to be so complicated a philosopher will need to learn from the historians of technology A few years ago the philosopher Elisabeth Straker concluded that a historical philosophy of technology is required since history and history alone provides all those concepts that form part of the repertoire of the philosophical analysis of technology And she added that this goes far beyond the triviality that like other cultural achievements technology has its historical development Now historical comprehension is no substitute for a logical methodology in the analysis of technological problems

Metals and the Royal Society D. R. F. West, 2024-11-01 In this book two distinguished metallurgists have traced the role of metallurgical technology in the creation of the scientific revolution and the formation of the Royal Society

Science and American Foreign Relations since World War II Greg Whitesides, 2020-05-28 The sciences played a critical role in American foreign policy after World War II From atomic energy and satellites to the green revolution scientific advances were central to American diplomacy in the early Cold War as the United States leveraged its scientific and technical pre eminence to secure alliances and markets The growth of applied research in the 1970s exemplified by the biotech industry led the United States to promote global intellectual property rights Priorities shifted with the collapse of the Soviet Union as attention turned to information technology and environmental sciences Today international relations take place within a scientific and technical framework whether in the headlines on global warming and the war on terror or in the fine print of intellectual property rights

Science and American Foreign Relations since World War II provides the historical background necessary to understand the contemporary geopolitics of science

The Sciences Were Never at War Gavin Rylands De Beer, 1960

Neutrality in Twentieth-Century Europe Rebecka Lettevall, Geert Somsen, Sven Widmalm, 2012-08-21 Whether in science or in international politics neutrality has sometimes been promoted not only as a viable political alternative but as a lofty ideal in politics by nations proclaiming their peacefulness in science as an underpinning of epistemology in journalism and other intellectual pursuits as a foundation of a professional ethos Time and again scientists and other intellectuals have claimed their endeavors to be neutral elevated

above the world of partisan conflict and power politics This volume studies the resonances between neutrality in science and culture and neutrality in politics By analyzing the activities of scientists intellectuals and politicians sometimes overlapping categories of mostly neutral nations in the First World War and after it traces how an ideology of neutralism was developed that soon was embraced by international organizations This book explores how the notion of neutrality has been used and how a neutralist discourse developed in history None of the contributions take claims of neutrality at face value some even show how they were made to advance partisan interests The concept was typically clustered with notions such as peace internationalism objectivity rationality and civilization But its meaning was changeable varying with professional ideological or national context As such *Neutrality in Twentieth Century Europe* presents a different perspective on the century than the story of the great belligerent powers and one in which science culture and politics are inextricably mixed *The Politics of Pure Science* Daniel S. Greenberg, 1999-08 Dispelling the myth of scientific purity and detachment Daniel S Greenberg documents in revealing detail the political processes that underpinned government funding of science from the 1940s to the 1970s **Cultivating Commerce** Sarah Easterby-Smith, 2017-11-09 Sarah Easterby Smith rewrites the histories of botany and horticulture from the perspectives of plant merchants who sold botanical specimens in the decades around 1800 These merchants were not professional botanists nor were they the social equals of refined amateurs of botany Nevertheless they participated in Enlightenment scholarly networks acting as intermediaries who communicated information and specimens Thanks to their practical expertise they also became sources of new knowledge in their own right *Cultivating Commerce* argues that these merchants made essential contributions to botanical history although their relatively humble status means that their contributions have received little sustained attention to date Exploring how the expert nurseryman emerged as a new social figure in Britain and France and examining what happened to the elitist masculine culture of amateur botany when confronted by expanding public participation Easterby Smith sheds fresh light on the evolution of transnational Enlightenment networks during the Age of Revolutions *Echoes of War* Bernard Lovell, 1991-01-01 This book presents a passionate first hand account of the development of the Home Sweet Home H2S radar systems during World War II It provides numerous personal insights into the scientific culture of wartime Britain and details the many personal sacrifices setbacks and eventual triumphs made by those actively involved Sir Bernard Lovell led the group that developed the H2S radar system to identify towns and other targets at night or during heavy cloud cover H2S was successful during the attack on Hamburg in January 1943 as well as the air war against U boats in the Bay of Biscay Sainik Samachar ,1970 **A Treatise on the Science of War and Fortification** Simon François baron Gay de Vernon, 1817
