University Responsibility for the Adjudication of Research Misconduct Stefan Franzen, 2021-05-12 This book offers a scientific whistleblower's perspective on current implementation of federal research misconduct regulations It provides a narrative of general interest that relates current cases of research ethics to philosophical historical and sociological accounts of fraud in scientific research The evidence presented suggests that the problems of falsification and fabrication remain as great as ever but hidden because the current system puts universities in charge of investigations and permits them to use confidentiality regulations to hide the outcomes of investigations The book documents the significant conflict of interest that arises because federal regulation gives universities the responsibility to conduct investigations of their own faculty with severely limited oversight The book is intended for young research scientists or anyone who wishes to understand the challenges faced by scientists in the workplace today The central thread in the book is an exclusive account of an experienced research scientist who was the first to expose the facts that led to the longest running research misconduct investigation in the history of the National Science Foundation

On Fact and Fraud David Goodstein, 2010-02-01 Fascinating case studies of scientific controversies and misconduct with valuable insights on how to identify avoid and prevent fraud Leonardo In David Goodstein's varied experience as a physicist and educator and as vice provost at Caltech a job in which he was responsible for investigating all allegations of scientific misconduct a deceptively simple question has come up time and again What constitutes fraud in science Here Goodstein takes us on a tour of real controversies from the front lines of science and helps readers determine for themselves whether or not fraud occurred Cases include among others those of Robert A. Millikan whose historic measurement of the electron's

charge has been maligned by accusations of fraud Martin Fleischmann and Stanley Pons and their discovery of cold fusion Victor Ninov and the supposed discovery of element 118 Jan Hendrik Schön from Bell Labs and his work in semiconductors and J Georg Bednorz and Karl Müller's discovery of high temperature superconductivity a seemingly impossible accomplishment that turned out to be real Fraud in science is not as easy to identify as one might think When accusations of scientific misconduct occur truth can be elusive and the cause of a scientist's ethical misstep isn't always clear On Fact and Fraud looks at actual cases in which fraud was committed or alleged explaining what constitutes scientific misconduct and what doesn't and providing readers with the ethical foundations needed to discern and avoid fraud wherever it may arise Superb It will be the definitive book on the subject Richard A Muller University of California Berkeley
