Scientific Knowledge Philosophic Thoug:

Scientific Knowledge and Philosophic Thought Harold Himsworth, 2019-12-01 Originally published in 1986 Are there two kinds of problems the scientific and the philosophic each requiring different methods for solution Or are there rather two different ways of approaching a problem each yielding a different answer according to the method used Biomedical researcher Sir Harold Himsworth urges scientists not to shy away from using scientific methods to grapple with problems traditionally accepted as belonging to the province of philosophy The difference between science and philosophy lies not in the problems to which they are directed Himsworth argues but rather in the methods they use for solving them To the scientist a proposition is something to be investigated to the philosopher something to be accepted as a basis for thought Since the development of the scientific method substantial progress has been made toward mastering problems in the natural environment If we are ever to attain a degree of control over problems that derive from human activities Himsworth claims that we only succeed by approaching them in a comparably objective way

Cognitive Semantics and Scientific Knowledge András Kertész, 2004-01-01 The book focuses on the question of how and to what extent cognitive semantic approaches can contribute to the new field of the cognitive science of science The argumentation is based on a series of instructive case studies which are intended to test the prospects and limits of the metascientific application of both holistic and modular cognitive semantics The case studies show that while cognitive semantic research is able to solve problems which have traditionally been the domain of the philosophy of science it also encounters serious limits The prospects and the limits thus revealed suggest new research topics which in future can be tackled by cognitive semantic approaches to the cognitive science of science

Philosophers of Knowledge and Thought Hector Davidson, This book consists of the following titles Ludwig Wittgenstein Ludwig Wittgenstein one of the most influential philosophers of the 20th century profoundly shaped modern thought particularly in the realms of language logic and the philosophy of mind His philosophy spans two distinct periods marked by an evolution in his views on the relationship between language meaning and reality Wittgenstein's work challenges the way we think about and use language positing that philosophical problems often arise from misunderstandings of language and its limitations Martha Nussbaum Martha Nussbaum is one of the most influential philosophers of our time particularly known for her contributions to feminist theory political philosophy and ethics A professor at the University of Chicago her work spans a wide array of topics including justice human capabilities human rights and the role of emotions in moral decision making Nussbaum's ideas have significantly impacted both academic philosophy and practical policy with her innovative theories offering valuable insights into the intersection of ethics politics and human development Bertrand Russell Bertrand Russell born on May 18 1872 in Trellech Monmouthshire Wales was a British philosopher logician mathematician and social critic Coming from a prominent aristocratic family with his grandfather Lord John Russell having served as a British Prime Minister Russell had an influential upbringing He attended Cambridge

University where he studied under Alfred North Whitehead a notable logician and philosopher Russell was deeply influenced by the works of Gottlob Frege and David Hilbert *Scientific Knowledge and Philosophic Thought* Harold Himsworth, 2019 Are there two kinds of problems the scientific and the philosophic each requiring different methods for solution Or are there rather two different ways of approaching a problem each yielding a different answer according to the method used Biomedical researcher Sir Harold Himsworth urges scientists not to shy away from using scientific methods to grapple with problems traditionally accepted as belonging to the province of philosophy The difference between science and philosophy lies not in the problems to which they are directed Himsworth argues but rather in the methods they use for solving them To the scientist a proposition is something to be investigated to the philosopher something to be accepted as a basis for thought Since the development of the scientific method substantial progress has been made toward mastering problems in the natural environment If we are ever to attain a degree of control over problems that derive from human activities Himsworth claims that we only succeed by approaching them in a comparably objective way Faith and Science in Russian Religious Thought Teresa Obolevitch, 2019 Faith and Science in Russian Religious Thought provides a comprehensive analysis of the relationship between science and faith in Russian religious thought Teresa Obolevitch offers a synthetic approach on the development of the problem throughout the whole history of Russian thought starting from the medieval period and arriving in contemporary times She considers the relationship between science and religion in the eighteenth century the so called academic philosophy of the 19th and 20th century the thought of Peter Chaadaev the Slavophiles and in the most influential literature figures such as Fedor Dostoevsky and Lev Tolstoy The volume also analyses two channels of the formation of philosophy in the context of the relationship between theology and science in Russia The first is connected with the attempt to rationalize the truths of faith and is exemplified by Vladimir Soloviev and Nikolai Lossky the second with the apophatic tradition is presented by Pavel Florensky and Semen Frank The book then describes the relation to scientific knowledge in the thought of Lev Shestov Nikolai Berdyaev Sergius Bulgakov and Alexei Losev as well as the original project of Russian Cosmism on the examples of Nikolai Fedorov Konstantin Tsiolkovsky and Vladimir Vernadsky Obolevitch presents the current state of the discussion on this topic by paying attention to the Neoplatonic synthesis of Georges Florovsky and his followers and offers the brief comparative analysis of the relationship between science and religion from the Western and Russian perspectives Francis Bacon and the Limits of Scientific Knowledge Dennis Desroches, 2006-09-15 While Francis Bacon continues to be considered the father of modern experimental science his writings are no longer given close attention by most historians and philosophers of science let alone by scientists themselves In this new book Dennis Desroches speaks up loudly for Bacon showing how we have yet to surpass the fundamental theoretical insights that he offered towards producing scientific knowledge The book first examines the critics who have led many generations of scholars in fields as diverse as literary criticism science studies feminism philosophy and history to think of Bacon as an outmoded landmark in the history

of ideas rather than a crucial thinker for our own day Bacon's own work is seen to contain the best responses to these various forms of attack Desroches then focuses on Bacon's *Novum Organum* *The Advancement of Learning* and *De Augmentis* in order to discern the theoretical rather than simply the empirical or utilitarian nature of his programme for the renovation of the natural sciences The final part of the book draws startling links between Bacon and one of the twentieth century's most important historians philosophers of science Thomas Kuhn discerning in Kuhn's work a reprise of many of Bacon's fundamental ideas despite Kuhn's clear attempt to reject Bacon as a significant contributor to the way we think about scientific practice today Desroches concludes then that Bacon was not simply the father of modern science he is still in the process of fathering it

The Technique of Thought Ian James, 2019-02-26 Interrogating the work of four contemporary French philosophers to rethink philosophy's relationship to science and science's relationship to reality *The Technique of Thought* explores the relationship between philosophy and science as articulated in the work of four contemporary French thinkers Jean Luc Nancy Fran ois Laruelle Catherine Malabou and Bernard Stiegler Situating their writings within both contemporary scientific debates and the philosophy of science Ian James elaborates a philosophical naturalism that is notably distinct from the Anglo American tradition The naturalism James proposes also diverges decisively from the ways in which continental philosophy has previously engaged with the sciences He explores the technical procedures and discursive methods used by each of the four thinkers as distinct techniques of thought that approach scientific understanding and knowledge experimentally Moving beyond debates about the constructed nature of scientific knowledge *The Technique of Thought* argues for a strong variably configured and entirely novel scientific realism By bringing together post phenomenological perspectives concerning individual or collective consciousness and first person qualitative experience with science's focus on objective and third person quantitative knowledge James tracks the emergence of a new image of the sciences and of scientific practice Stripped of aspirations toward total mastery of the universe or a grand theory of everything this renewed scientific worldview along with the simultaneous reconfiguration of philosophy's relationship to science opens up new ways of interrogating immanent reality

Philosophical Thought in Russia in the Second Half of the Twentieth Century Vladislav Lektorsky, Marina F. Bykova, 2019-01-10 *Philosophical Thought in Russia in the Second Half of the 20th Century* is the first book of its kind that offers a systematic overview of an often misrepresented period in Russia's philosophy Focusing on philosophical ideas produced during the late 1950s early 1990s it reconstructs the development of genuine philosophical thought in the Soviet period and introduces those non dogmatic Russian thinkers who saw in philosophy a means of reforming social and intellectual life Covering such areas of philosophical inquiry as philosophy of science philosophical anthropology the history of philosophy activity approach as well as communication and dialogue studies the volume presents and thoroughly discusses central topics and concepts developed by Soviet thinkers in that particular fields Written by a team of internationally recognized scholars from Russia and abroad it examines the work of

well known Soviet philosophers such as Mikhail Bakhtin Evald Ilyenkov and Merab Mamardashvili as well as those important figures such as Vladimir Bibler Alexander Zinoviev Yury Lotman Georgy Shchedrovitsky Genrich Batishchev Sergey Rubinstein and others who have often been overlooked By introducing and examining original philosophical ideas that evolved in the Soviet period the book confirms that not all Soviet philosophy was dogmatic and tied to orthodox Marxism and the ideology of Marxism Leninism It shows Russian philosophical development of the Soviet period in a new light as a philosophy defined by a genuine discourse of exploration and intellectual progress rather than stagnation and dogmatism In addition to providing the historical and cultural background that explains the development of the 20th century Russian philosophy the book also puts the discussed ideas and theories in the context of contemporary philosophical discussions showing their relevance to nowadays debates in Western philosophy With short biographies of key thinkers an extensive current bibliography and a detailed chronology of Soviet philosophy this research resource provides a new understanding of the Soviet period and its intellectual legacy 100 years after the Russian Revolution *Hélène Metzger, Historian and Historiographer of the Sciences* Cristina Chimisso, 2019-12-05 Is there something important to learn from the history of science about knowledge and the mind Do habits and emotions play a significant role in science To what extent do present concerns and knowledge distort our understanding of past texts and practices These are crucial questions in current debates but they are not new This monograph evaluates the answers to these and other questions that Hélène Metzger 1889 1944 provided Metzger who was the leading historian of chemistry of her generation left us unparalleled reflections on the theory practice and aims of history writing Despite her influence on subsequent generations of thinkers including Thomas Kuhn this is the first full length monograph on her Beginning with an overview of her life and the challenges faced by a Jewish woman working within academia the book goes on to discuss the most important themes of her historiography and her engagement with other disciplines notably general history philosophy ethnology and religious studies The book also explores both Metzger s immediate legacy and the relevance of her ideas for a host of current debates in science studies The Appendices include four of her historiographical papers translated into English for the first time [Pragmatic Idealism](#) , 2023-05-15 The System of Pragmatic Idealism is of special importance for Nicholas Rescher s philosophical work because here he has presented the systematic approach at once Dedicated to his 70th birthday a group of European and U S American philosophers discuss the main topics of Rescher s philosophical system The contributions which are presented here for the first time and Nicholas Rescher s responses cover the most important topics of philosophy and give a deep and detailed insight into the strenght of Rescher s pragmatic idealism This volume is of interest for philosophers studying Rescher s philosophy and for all those who are interested in systematic philosophy and the vividnes of pragmatism and idealism in present philosophy
