

SCIENTIFIC INQUIRY by Susan Blackaby

Scientists are like explorers,
using what they know and see
to blaze a trail that, step by step,
will lead to new discoveries:

Formulate, distill and focus,
narrow down, define the gist,
determine scope and pinpoint locus—
this is your **hypothesis**.

Gather all the stuff you need,
to put in play the machinations.
Document the happenings—
these comprise your **observations**.

What things change and what things stick?
Record the outcomes and effects.
Don't presume and don't predict—
collect the **data**: just the facts.

Combine the concrete things you see
with what you know and trials you test.
Interpretation is the key—
results are where you end the quest.

Encyclopedia of Literature and Science Pamela Gossin,2002-08-30 Science and literature have always been strange bedfellows Like puzzle pieces they fit because they re different Some of the greatest works of world literature have been inspired by the marvels of the scientific world Scientists have written works of the imagination Even formal scientific writings have been known to employ rhetoric There is a tendency to think of literature and the humanities in general as having little to do with science Yet scholars have conducted fruitful studies of the history and philosophy of science With the rise of technology scholars have also applied scientific analysis to the study of literature and the creative process The intersection of scientific and humanistic inquiry is finally being mapped This volume includes more than 650 A Z entries on topics and themes in science and literature significant writers key scientists seminal works and important theories and methodologies This reference defines the rapidly emerging interdisciplinary field of literature and science An introductory essay traces the history of the field its growing reputation and the current state of research Broad in scope the volume covers world literature from its beginnings to the present day and illuminates the role of science in literature and literary studies A wide range of experts contributed entries to this volume each of which concludes with a brief bibliography The entire volume closes with a list of works for further reading

Cataloging Policy and Support Office,2004 Transformations of Electricity in Nineteenth-Century Literature and Science

Stella Pratt-Smith,2017-05-15 Throughout the nineteenth century practitioners of science writers of fiction and journalists wrote about electricity in ways that defied epistemological and disciplinary boundaries Revealing electricity as a site for intense and imaginative Victorian speculation Stella Pratt Smith traces the synthesis of nineteenth century electricity made possible by the powerful combination of science literature and the popular imagination With electricity resisting clear description even by those such as Michael Faraday and James Clerk Maxwell who knew it best Pratt Smith argues that electricity was both metaphorically suggestive and open to imaginative speculation Her book engages with Victorian scientific texts popular and specialist periodicals and the work of leading midcentury novelists including Charles Dickens Charlotte Bronte Emily Bronte William Makepeace Thackeray and Wilkie Collins Examining the work of William Harrison Ainsworth and Edward Bulwer Lytton Pratt Smith explores how Victorian novelists attributed magical qualities to electricity imbuing it with both the romance of the past and the thrill of the future She concludes with a case study of Benjamin Lumley

s Another World which presents an enticing fantasy of electricity's potential based on contemporary developments Ultimately her book contends that writing and reading about electricity appropriated and expanded its imaginative scope transformed its factual origins and applications and contravened the bounds of literary genres and disciplinary constraints Proclus' Hymns Robbert Maarten van den Berg, 2001-12-01 This book studies the hymns composed by the Neoplatonist Proclus in the context of his philosophy Its main claim is that the hymns should be understood in the context of theurgy the ritual art adopted by the Neoplatonists in order to obtain mystical experiences The first part of the book consists of a series of essays which discuss the relation of the hymns to Proclus Neoplatonism his theory of poetry and especially to theurgy The second part offers translations of the individual hymns together with a detailed commentary This study will be of special interest to those working in the field of Neoplatonism and a helpful guide to scholars of Late Antique poetry and religion who wish to explore these intriguing yet at times obscure poems **Appletons' Popular Science Monthly**, 1900 *The New Art of*

Beyond Cartesian Dualism Steve Alsop, 2005-11-17 There is surprisingly little known about affect in science education Despite periodic forays into monitoring students attitudes toward science the effect of affect is too often overlooked *Beyond Cartesian Dualism* gathers together contemporary theorizing in this axiomatic area In fourteen chapters senior scholars of international standing use their knowledge of the literature and empirical data to model the relationship between cognition and affect in science education Their revealing discussions are grounded in a broad range of educational contexts including school classrooms universities science centres travelling exhibits and refugee camps and explore an array of far reaching questions What is known about science teachers and students emotions How do emotions mediate and moderate instruction How might science education promote psychological resilience How might educators engage affect as a way of challenging existing inequalities and practices This book will be an invaluable resource for anybody interested in science education research and more generally in research on teaching learning and affect It offers educators and researchers a challenge to

recognize the mutually constitutive nature of cognition and affect *Science Fact and Science Fiction* Brian M. Romantic Border Crossings Larry Peer, 2016-04-08 Romantic Border Crossings participates in the important movement towards otherness in Romanticism by uncovering the intellectual and disciplinary anxieties that surround comparative studies of British American and European literature and culture As this diverse group of essays demonstrates we can now speak of a global Romanticism that encompasses emerging critical categories such as Romantic pedagogy transatlantic studies and transnationalism with the result that new works by writers marginalized by class gender race or geography are invited into the canon at the same time that fresh readings of traditional texts emerge Exemplifying these developments the authors and topics examined include Elizabeth Inchbald Lord Byron G rard de Nerval English Jacobinism Goethe the Gothic Orientalism Emily Dickinson Walt Whitman Anglo American conflicts manifest destiny and teaching romanticism The collection constitutes a powerful rethinking of the divisions that continue to haunt Romantic studies **A Critical**

Bibliography of French Literature V2 16th C , Integrating the Arts in Science: 30 Strategies to Create Dynamic Lessons, 2nd Edition Vivian Poey, Nicole Weber, 2022-01-14 Use the arts to inspire engage and motivate students in science class This book provides useful strategies to help teachers integrate creative movement drama music poetry storytelling and visual arts in science topics These teacher friendly strategies bring science to life while building students creativity and critical thinking skills Regenerating Romanticism Melissa Bailes, 2023-04-27 Within key texts of Romantic era aesthetics William Wordsworth S T Coleridge and other writers and theorists pointed to the poet naturalist and physician Erasmus Darwin as exemplifying a lack of originality and sensibility in the period s scientific literature the very qualities that such literature had actually sought to achieve The success of this strawman tactic in establishing Romantic era principles resulted in the historical devaluation of numerous other especially female imaginative authors creating misunderstandings about the aesthetic intentions of the period s scientific literature that continue to hinder and mislead scholars even today Regenerating Romanticism demonstrates that such strategies enabled some literary critics and arbiters of Romantic era aesthetics to portray literature and science as locked in competition with one another while also establishing standards for the literary canon that mirrored developing ideas of scientific or biological sexism and racism With this groundbreaking study Melissa Bailes renovates understandings of sensibility and its importance to the late eighteenth and early nineteenth century movement of scientific literature within genres such as poetry novels travel writing children s literature and literary criticism that obviously and technically engage with the natural sciences
