Scientific American Archive Online Sciamarchive.Org Staff, WWW Sciamarchive Org, 2001-01-01 **Scientific American**, 1897 Scientific American, 2008 *Steampunk Film* Robbie McAllister, 2019-03-07 *Steampunk Film A Critical Introduction* is a concise and accessible overview of steampunk's indelible impact within film and acts as a case study for examining the ways with which genres hybridize and coalesce into new forms. Since the beginning of the 21st century a series of high profile and big budget films have adopted steampunk identities to re-imagine periods of industrial development into fantastical histories where future meets past. By calling this growing mass cultural fetishism for anachronistic machines into question this book examines how a retro futuristic romanticism for technology powered by cogs pistons and steam engines has taken center stage in blockbuster cinema. As the first monograph to consider cinema's unique relationship with steampunk it places this burgeoning genre in the context of ongoing debates within film theory each of which reflecting the movement's remarkable interest in reengineering historical technologies. Rather than acting as a niche subculture Robbie McAllister argues that steampunk's proliferation in mainstream filmmaking reflects a desire to reassess contemporary relationships with technology and navigate the intense changes that the medium itself is experiencing in the 21st century.

The Ecology of American Noir Katrina Younes, 2025-04-07 This volume investigates the relationship between the conventions of noir fiction and film and its sub types in relation to environmental crises. Dr Younes addresses questions that not only allow readers to re-read early hardboiled literature and neo noir films but also help identify a new sub genre of noir and develop an ecocritical methodology eco noir. This text traces the development of strategies of mapping urban blight and environmental deterioration in classic hardboiled fiction of the 1940s neo noir films of the 1970s and eco noir texts of the post millennial period. Introducing the concept of eco noir as both a sub genre and fictional form as well as a methodology the volume develops a new way of understanding the relationship between noir and climate fiction texts. Through a close reading of hardboiled neo noir and eco noir texts including those by Dashiell Hammett Raymond Chandler Robert Towne Kim Stanley Robinson and Jeff VanderMeer it asks and addresses the question how does each sub genre of noir map the noir atmosphere of the private investigator's natural setting in terms of environmental toxicity. *The Ecology of American Noir* contributes to critical conversations in both noir and ecocritical scholarship making clear how a new understanding of noir as defined through environmental and atmospheric conditions invites readers viewers and scholars of the genre to generate meaningful dialogues about our decaying and deteriorating environment.

Queering Science Communication Lindy A. Orthia, Tara Roberson, 2024-11-12 A book on queer themes and science communication is timely if not well overdue. LGBTIQ+ people have unique contributions to make and issues to meet through science communication. So bringing queer and science communication together is an important step for queer protest liberation and visibility. This collection examines the place of queer people within science communication and asks what it means for the field to queer science communication practice.

theory and research agendas Written by leading names in the field it offers concrete examples for academics students and practitioners who strive to foster radical inclusivity and equity in science communication

Military Neuroscience and the Coming Age of Neurowarfare Armin Krishnan,2016-10-04 Krishnan describes military applications of neuroscience research and emerging neurotechnology with relevance to the conduct of armed conflict and law enforcement This work builds upon literature by scholars such as Moreno and Giordano and fills an existing gap not only in terms of reviewing available and future neurotechnologies and relevant applications but by discussing how the military pursuit of these technologies fits into the overall strategic context The first to sketch future neurowarfare by looking at its potentials as well as its inherent limitations this book s main theme is how military neuroscience will enhance and possibly transform both classical psychological operations and cyber warfare Its core argument is that nonlethal strategies and tactics could become central to warfare in the first half of the twenty first century This creates both humanitarian opportunities in making war less bloody and burdensome as well as some unprecedented threats and dangers in terms of preserving freedom of thought and will in a coming age where minds can be manipulated with great precision
