Philosophy, Science, Education and Culture Robert Nola, Gürol Irzik, 2006-02-22 Currents such as epistemological and social constructivism postmodernism and certain forms of multiculturalism that had become fashionable within science education circles in the last decades lost sight of critical inquiry as the core aim of education In this book we develop an account of education that places critical inquiry at the core of education in general and science education in particular Since science constitutes the paradigm example of critical inquiry we explain the nature of science paying particular attention to scientific methodology and scientific modeling and at the same time showing their relevance in the science classroom We defend a universalist rationalist and objectivist account of science against epistemological and social constructivist views postmodernist approaches and epistemic multiculturalist accounts

Classifying Science Rick Szostak, 2007-11-03 Classification is the essential first step in science The study of science as well as the practice of science will thus benefit from a detailed classification of different types of science In this book science defined broadly to include the social sciences and humanities is first unpacked into its constituent elements the phenomena studied the data used the theories employed the

methods applied and the practices of scientists These five elements are then classified in turn Notably the classifications of both theory types and methods allow the key strengths and weaknesses of different theories and methods to be readily discerned and compared Connections across classifications are explored should certain theories or phenomena be investigated only with certain methods What is the proper function and form of scientific paradigms Are certain common errors and biases in scientific practice associated with particular phenomena data theories or methods The classifications point to several ways of improving both specialized and interdisciplinary research and teaching and especially of enhancing communication across communities of scholars The classifications also support a superior system of document classification that would allow searches by theory and method used as well as causal links investigated **Defending Science - within**

Explanation, Laws, and Causation Wei Wang, 2017-04-21 Scientific explanation laws of nature and causation are crucial and frontier issues in the philosophy of science This book studies the complex relationship between the three concepts aiming to achieve a holistic synthesis about explanation laws causation By reviewing Hempel s scientific explanation models and Salmon s three conceptions the epistemic modal and ontic conception the book suggests that laws are essential to explanation and that our understanding of laws will help solve the problems of the latter Concerning the nature of laws this book tackles both the problems of regularity approach and necessitarian approach It also proposes that the ontological order of explanation should be from events or processes to causation then to regularity laws and finally to science system but the epistemological order should be from science system to laws to explanation and causation In addition this book examines the legitimacy of *ceteris paribus* laws the connection between explanation and reduction the relation between explanation and interpretation and some other issues closely related to explanation laws causation This book will attract scholars and students of philosophy of science natural sciences social sciences etc
