Scientists And The Sea 1650-1900 A Study Of Marine Science:

Scientists and the Sea, 1650-1900 Margaret Deacon, 2018-04-17 Scientists and the Sea is a history of how the scientific study of the sea has developed over a period of nearly 2500 years Beginning with the speculations of Greek philosophers it carries the story forward showing how curiosity about the ocean appeared in many different forms and locations before in the late 19th century the first deep sea researches heralded the foundation of the science known today as oceanography Originally published in 1971 this book has never been superseded as the most comprehensive and wide ranging treatment of the emergence of marine science within the western scientific tradition After three introductory chapters dealing with knowledge up to the Renaissance the main part of the work shows how pioneers of scientific observation at sea during the 17th and 18th centuries made notable discoveries but that it was not until the middle of the 19th century when aided by the advance of technology scientists were able to undertake the first explorations of the ocean depths This second edition contains a new introduction and bibliography

Water Worlds: Human Geographies of the Ocean Kimberley Peters, 2016-02-11 Our world is a water world Seventy percent of our planet consists of ocean However geography has traditionally overlooked this vital component of the earth's composition The word geography directly translates as earth writing and in line with this definition the discipline has preoccupied itself with the study of terrestrial spaces of society and nature This book challenges human geography's preoccupation with the terrestrial investigating the terra incognita of the seas and oceans Linking to new theoretical debates shaping the geographic discipline such as affect assemblage emotion hybridity and the more than human this volume unlocks new knowledge concerning the human geographies of ocean space The book casts adrift stable bounded and fixed conceptions of space and advances geographical understanding based on the world as becoming changing mobile and processional This ontology supports the notion that the oceans are not simply fluid in a literal way but also in a conceptual sense suggesting that the seas have their own fluid

natures their own capacities and agencies which are co fabricated with social and cultural life This book features twelve chapters authored by key academics contributing to this growing field of research The book is divided into three sections including an Introduction by the editors and a foreword by Prof Philip E Steinberg the leading scholar in the field of maritime geographies The first section of the book considers the ways in which different watery spaces from the Atlantic Ocean to the Mediterranean Sea have been conceptualized theorized and known through metaphors voyages of discovery and scientific endeavour The second section examines how oceans are experienced through various activities including driving on water kayaking in water and diving under water The final section explores the relations between human life and the nature of the sea as a material mobile and more than human spa *The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences* David C. Lindberg, Peter J. Bowler, Ronald L. Numbers, Roy Porter, 2003 This book in the highly respected Cambridge History of Science series is devoted to the history of the life and earth sciences since 1800 It provides comprehensive and authoritative surveys of historical thinking on major developments in these areas of science on the social and cultural milieus in which the knowledge was generated and on the wider impact of the major theoretical and practical innovations The articles are written by acknowledged experts who provide concise accounts of the latest historical thinking coupled with guides to the most important recent literature In addition to histories of traditional sciences the book covers the emergence of newer disciplines such as genetics biochemistry and geophysics The interaction of scientific techniques with their practical applications in areas such as medicine is a major focus of the book as is its coverage of controversial areas such as science and religion and environmentalism *The Sea, Volume 8: Deep-Sea Biology* Gilbert T. Rowe, 1983-01-04

aquaculture Exploration and Science Michael Sean Reidy, Gary Kroll, Erik M. Conway, 2006-12-27 This comprehensive volume explores the intricate mutually dependent relationship between science and exploration how each has repeatedly built on the discoveries of the other and in the process opened new frontiers A simple question Which came first advances in navigation or successful voyages of discovery A complicated answer Both and neither For more than four centuries scientists and explorers have worked together sometimes intentionally and sometimes not in an ongoing symbiotic partnership When early explorers brought back exotic flora and fauna from newly discovered lands scientists were able to challenge ancient authorities for the first time As a result scientists not only invented new navigational tools to encourage exploration but also created a new approach to studying nature in which observations were more important than reason and authority The story of the relationship between science and exploration analyzed here for the first time is nothing less than the history of modern science and the expanding human universe *The Atlantic Enlightenment* Francis D. Cogliano, 2017-03-02 Transatlantic studies especially during the enlightenment period is of increasing critical interest amongst scholars But was there an Atlantic Enlightenment This interdisciplinary collection harnesses the work of some of the most prominent figures in the fields of literature intellectual cultural and social history geography and political science to examine the emergence of the Atlantic as one of the key conceptual paradigms of eighteenth century studies In this spirit the contributors offer new insights into the conditions that generated a major transatlantic genre of writing addressing questions of race political economy and the transmission of Enlightenment ideas in literary political historical and religious contexts Whether examining John Witherspoon s evolution from Calvinist theologian to Revolutionary theorist or Adam Smith s reception in the antebellum United States the essays remind us that the transatlantic traffic in ideas moved from west to east from east to west and in patterns that both complicate and enrich what we thought we knew about the vectors of transmission in this pivotal period
