Kachru, 2015-02-26 Professor Braj Kachru b 1932 has pioneered shaped and defined the scholarly field of world Englishes. He is the founder and co editor of World Englishes the associate editor of the Oxford Companion to the English Language and contributor to the Cambridge History of the English Language. His research on world Englishes the Kashmiri language and literature and theoretical and applied studies on language and society has resulted in more than 25 authored and edited volumes and more than 100 research papers review articles and reviews. The first volume of these Collected Works brings together a number of Kachru's key papers from 1976 to 1990 covering Kachru's early work in the development of World Englishes as a concept and his exploration of non native varieties of English. **Science, Technology & Society**, 1998

Science, Technology and Society, 1996 *Silane Coupling Agents* E.P. Plueddemann, 2013-11-11 Much progress has been made in the last 8 years in understanding the theory and practice of silane coupling agents. A major advance in this direction was the measurement of true equilibrium constants for the hydrolysis and formation of siloxane bonds. Equilibrium constants for bond retention are so favorable that a silane coupling agent on silica has a thousandfold advantage for bond retention in the presence of water over an alkoxysilane bond formed from hydroxy functional polymers and silica. In practice the bonds of certain epoxies to silane primed glass resist debonding by water about a thousand times as long as the epoxy bond to unprimed glass. Siloxane bonds of silane coupling agents to metal oxides seem to follow the same mechanism of equilibrium hydrolysis and rebonding although equilibrium constants have not been measured for individual metal oxygen silicon bonds. This suggests however that methods of improving bond retention to glass will also improve the water resistance of bonds to metals of standard coupling agents with a hydrophobic silane or one. Modification with extra siloxane cross linking have improved the water resistance of bonds to glass and metals another hundredfold over that obtained with single coupling agents. *Documentation Abstracts*, 1985 *Understanding New Media* Kim H. Nanotechnology is an interdisciplinary field that aims to connect what is seen with the naked eye and what is unseen on the molecular level.
