SCORE '96: Solar Convection and Oscillations and their Relationship F.P. Pijpers, Jørgen

Christensen-Dalsgaard, C.S. Rosenthal, 2012-12-06 This volume contains the reviews and poster papers presented at the workshop Solar Convection and Oscillations and their Relationship SCORE 96 held in Aarhus Denmark May 27 31 1996 The aim of this workshop was to bring together experts in the fields of convection and helioseismology and to stimulate collaborations and joint research The participation to this workshop was purposely kept limited in order to provide optimal conditions for informal discussions In autumn of 1995 the long awaited GONG network of solar telescopes became fully operational and the first data already show significant improvement over existing datasets on solar oscillations Furthermore in December of 1995 the satellite SOHO was launched which together with GONG provides a major step forward in both the quantity and the quality of available solar oscillation data It is with this in mind that we decided to organize the workshop to prepare for the optimal use of this wealth of data with which to deepen our understanding of solar structure and specifically of one of the longest standing problems in solar and stellar modelling the treatment of convection SCORE '96: Solar Convection and Oscillations and their Relationship F.P. Pijpers, Jørgen Christensen-Dalsgaard, C.S. Rosenthal, 1998-01-31 This volume contains the reviews and poster papers presented at the workshop Solar Convection and Oscillations and their Relationship SCORE 96 held in Aarhus Denmark May 27 31 1996 The aim of this workshop was to bring together experts in the fields of convection and helioseismology and to stimulate collaborations and joint research The participation to this workshop was purposely kept limited in order to provide optimal conditions for informal discussions In autumn of 1995 the long awaited GONG network of solar telescopes became fully operational and the first data already show significant improvement over existing datasets on solar oscillations Furthermore in December of 1995 the satellite SOHO was launched which together with GONG provides a major step forward in both the quantity and the quality of available solar oscillation data It is with this in mind that we decided to organize the workshop to prepare for the optimal use of this wealth of data with which to deepen our understanding of solar structure and specifically of one of the longest standing problems in solar and stellar modelling the treatment of convection Helioseismic Diagnostics of Solar Convection and Activity Zdenek Svestka, John W. Harvey, 2012-12-06 Most papers in this book were presented at the SOHO 9 Workshop Helioseismic Diagnostics of Solar Convection and Activity held on 12 15 July 1999 at Stanford University California U S A Some papers which were not presented at the workshop have been added after authors had been invited in Solar News to contribute to this book All papers submitted to this book have been refereed and only those of high scientific quality were accepted for publication The book focuses on the recent advances in our understanding of solar convection and activity and on methods and results of helioseismic diagnostics of the internal structures and dynamics of solar convection and active regions The methods of local helioseismology time distance tomography ring diagram analysis acoustic imaging and holography

intensively developed in the past few years have provided promising results on the deep structure of large scale convection and flows emerging active regions and sunspots Along with the traditional global helioseismology based on frequencies of resonant oscillation modes the local area techniques have become increasingly important for studying the solar interior and the mechanisms of solar activity The new high resolution helioseismology projects Solar Oscillation Investigation Michelson Doppler Imager SOI/MDI on board SOHO and ground based Global Oscillation Network Group GONG have provided a tremendous amount of solar oscillation data Extracting from these data the information about the internal properties and dynamics of the Sun and using this information in theoretical models and space weather forecasts are new challenges in solar physics

Variable Stars as Essential Astrophysical Tools Cafer Ibanogammalu, 2012-12-06 Pulsating and eccentric binary stars play a fundamentally important role in deciphering the mass distribution within stars The present volume reviews the fundamental concepts of both radial and nonradial oscillations in the stars including the Sun Helio and astroseismological results are reviewed from the basics to the most recent developments A new theory is presented which seems to explain the mechanism of the light and radial velocity variations of recently discovered Ap stars This textbook covers almost all kinds of variable stars of widely different characteristics It will serve as a reference text for a very long time to come not only for specialists but also for undergraduate students of physics and astronomy

The Solar Dynamics Observatory Phillip Chamberlin, William Dean Pesnell, Barbara Thompson, 2012-05-05 This volume is dedicated to the Solar Dynamics Observatory SDO which was launched 11 February 2010 The articles focus on the spacecraft and its instruments the Atmospheric Imaging Assembly AIA the Extreme Ultraviolet Variability Experiment EVE and the Helioseismic and Magnetic Imager HMI Articles within also describe calibration results and data processing pipelines that are critical to understanding the data and products concluding with a description of the successful Education and Public Outreach activities This book is geared towards anyone interested in using the unprecedented data from SDO whether for fundamental heliophysics research space weather modeling and forecasting or educational purposes Previously published in Solar Physics journal Vol 275 1 2 2012 Selected articles in this book are published open access under a CC BY NC 2 5 license at link.springer.com For further details please see the license information in the chapters

Imaging Convection and Magnetism in the Sun Shrahan Hanasoge, 2015-12-24 This book reviews the field of helioseismology and its outstanding challenges and also offers a detailed discussion of the latest computational methodologies The focus is on the development and implementation of techniques to create 3 D images of convection and magnetism in the solar interior and to introduce the latest computational and theoretical methods to the interested reader With the increasing availability of computational resources demand for greater accuracy in the interpretation of helioseismic measurements and the advent of billion dollar instruments taking high quality observations computational methods of helioseismology that enable probing the 3 D structure of the Sun have increasingly become central This book will benefit students and researchers with proficiency in basic numerical methods differential equations and linear

algebra who are interested in helioseismology

Solar Composition and its Evolution — from Core to Corona Claus Fröhlich, M. Huber, S.K. Solanki, Rudolf von Steiger, 2012-12-06 The discovery of chemical elements in celestial bodies and the first estimates of the chemical composition of the solar atmosphere were early results of Astrophysics the subdiscipline of Astronomy that was originally concerned with the general laws of radiation and with spectroscopy Following the initial quantitative abundance studies by Henry Norris Russell and by Cecilia Payne Gaposchkin a tremendous amount of theoretical observational laboratory and computational work led to a steadily improving body of knowledge of photospheric abundances a body of knowledge that served to guide the theory of stellar evolution Solar abundances determined from photospheric spectra together with the very similar abundances determined from carbonaceous chondrites where extensive information on isotopic composition is available as well are nowadays the reference for all cosmic composition measures Early astrophysical studies of the solar photospheric composition made use of atmosphere models and atomic data Consistent abundances derived from different atmospheric layers and from lines of different strength helped to confirm and establish both models and atomic data and eventually led to the now accepted so called absolute abundance values which for practical reasons however are usually given relative to the number of hydrogen nuclei

The Origin and Dynamics of Solar Magnetism M.J. Thompson, A. Balogh, J.L. Culhane, Å. Nordlund, S.K. Solanki, J.-P. Zahn, 2009-05-01 Starting in 1995 numerical modeling of the Earth's dynamo has flourished with remarkable success Direct numerical simulation of convection driven MHD flow in a rotating spherical shell show magnetic fields that resemble the geomagnetic field in many respects they are dominated by the axial dipole of approximately the right strength they show spatial power spectra similar to that of Earth and the magnetic field morphology and the temporal variation of the field resembles that of the geomagnetic field Christensen and Wicht 2007 Some models show stochastic dipole reversals whose details agree with what has been inferred from paleomagnetic data Glatzmaier and Roberts 1995 Kutzner and Christensen 2002 Wicht 2005 While these models represent direct numerical simulations of the fundamental MHD equations without parameterized induction effects they do not match actual planetary conditions in a number of respects Specifically they rotate too slowly are much less turbulent and use a viscosity and thermal diffusivity that is far too large in comparison to magnetic diffusivity Because of these discrepancies the success of geodynamo models may seem surprising In order to better understand the extent to which the models are applicable to planetary dynamos scaling laws that relate basic properties of the dynamo to the fundamental control parameters play an important role In recent years first attempts have been made to derive such scaling laws from a set of numerical simulations that span the accessible parameter space Christensen and Tilgner 2004 Christensen and Aubert 2006

Cartography of the Sun and the Stars Jean-Pierre Rozelot, Coralie Neiner, 2016-03-11 The mapping of the surface of stars requires diverse skills analysis techniques and advanced modeling i.e. the collaboration of scientists in various specialties This volume gives insights into new techniques allowing for the first time to obtain resolved images of stars It takes stock of what

has been achieved so far in Chile on the ESO VLTI instrument or in the States on the CHARA instrument In recent times interferometry combined with adaptive optics has allowed to reconstruct images of stars Besides the Sun of course by now five stars have been resolved in detail In addition to interferometry this book highlights techniques used for mapping the surfaces of stars using photometry made by space observatories Zeeman and Doppler Imaging mapping the surface element abundances via spectroscopy This book will also take stock of the best images of the solar surface made by connecting the differential rotation to the underlying physical parameters derived from helioseismology Recent measurements of flattening of the solar surface by SDO showed that the Sun s shape is linked to the rotation of the core It is shown how such a result is generalizable to the stars **Solar Variability and Climate** E. Friis-Christensen, 2000-12-31 Proceedings of an ISSI Workshop 28 June 2 July 1999 Bern Switzerland
