Iterative Methods without Inversion Anatoly Galperin,2016-11-17 *Iterative Methods without Inversion* presents the iterative methods for solving operator equations $f x = 0$ in Banach and or Hilbert spaces It covers methods that do not require inversions of f or solving linearized subproblems The typical representatives of the class of methods discussed are Ulm's and Broyden's methods Convergence analyses of the methods considered are based on Kantorovich's majorization principle which avoids unnecessary simplifying assumptions like differentiability of the operator or solvability of the equation These analyses are carried out under a more general assumption about degree of continuity of the operator than traditional Lipschitz continuity regular continuity Key Features The methods discussed are analyzed under the assumption of regular continuity of divided difference operator which is more general and more flexible than the traditional Lipschitz continuity An attention is given to criteria for comparison of merits of various methods and to
