Competition Law Hongyan Liu, 2009-09-24 A liner conference as a self regulation organisational form of liner shipping companies constitutes a typical hard core cartel with significant anti competitive effect One of the main three trade routes of liner shipping traffic is the Europe Asia Trade on the two ends of which both the European Community EC and the People s Republic of China PRC play important roles in the international liner shipping market However the competition regimes on liner conferences in both jurisdictions are not equivalent From a comparative point of view this book reviews the historical development of maritime policy and regulatory legislation in the EC and the PRC catches insight into the system of regulation regime and individual provisions in substantive and procedural meaning and finally provides a wide ranging perspective on the future competition regulation in respect of the latest developments in both jurisdictions Handbook of International

Trade and Transportation Bruce A. Blonigen, Wesley W. Wilson, 2018-01-26 International trade has grown rapidly over the past half century accommodated by the transportation industry through concomitant growth and technological change But while the connection between transport and trade flows is clear the academic literature often looks at these two issues separately This Handbook is unique in pulling together the key insights of each field while highlighting what we know about their intersection and ideas for future research in this relatively unexamined but growing area of study Maritime

Logistics Value in Knowledge Management Eon-Seong Lee, Dong-Wook Song, 2014-08-21 Knowledge management has been widely applied to various industries as a good strategy to help improve firms performance As globalisation accelerates and international trade increases more and more maritime transport operations have become one of the vitalest industries to receive large attention from international managers This is because the managers have perceived that the maritime transport system is an integrated entity within the global logistics and supply chain and it should be therefore managed in the most efficient and effective ways possible as an organic body within a global logistics system Taking this approach this book

examines how maritime transport operators such as shipping companies port terminal operators and freight forwarders could successfully play a role within the global logistics flow wherein they are embedded by improving their logistic value i.e maritime logistics value As per the objective the current book suggests a knowledge management based solution It attempts to systematically investigate what types of knowledge are needed in the maritime logistics industry how maritime operators could effectively acquire the knowledge and whether the acquired knowledge would help maritime operators enhance maritime logistics value This book provides not only comprehensive understandings of knowledge management strategy but also its practical application to the maritime logistics industry This would therefore be a useful guidebook for the managers academics and undergraduate postgraduate students in the field of maritime transport and global logistics to help them to gain comprehensive knowledge of the application of knowledge management strategy to the industry

from the merely curious to those seeking in depth knowledge University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs Risk Management in Port Operations, Logistics and Supply Chain Security Khalid Bichou, Michael Bell, Andrew Evans, 2013-12-04 Risk Management in Port Operations Logistics and Supply Chain Security is the first book to address security risk and reliability issues in maritime port and supply chain settings In particular this title tackles operational challenges that port shipping international logistics and supply chain operators face today in view of the new security regulations and the requirements of increased visibility across the supply chain *International Encyclopedia of Transportation* ,2021-05-13 In an increasingly globalised world despite reductions in costs and time transportation has become even more important as a facilitator of economic and human interaction this is reflected in technical advances in transportation systems increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts This has become particularly acute with the impact that Covid 19 has had on transportation across the world at local national and international levels Encyclopedia of Transportation Seven Volume Set containing almost 600 articles brings a cross cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering operations research economics geography and sociology in order to understand the changes taking place Emphasising the interaction between these different aspects of research it offers new solutions to modern day problems related to transportation Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines different parts of the world and different social perspectives The nine sections are structured around the following themes Transport Modes Freight Transport and Logistics Transport Safety and Security Transport Economics Traffic Management Transport Modelling and Data Management Transport Policy and Planning Transport Psychology Sustainability and Health Issues in Transportation Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future oriented view of new research areas or challenges The end result is a reference work that offers researchers and practitioners new approaches new ways of thinking and novel solutions to problems All encompassing and expertly authored this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications Maritime Transport Services in the Law of the Sea and the World Trade Organization Chuyang Liu, 2009 Since the beginnings of international law the law of the sea has been of paramount importance for international trade Yet this area of law and international trade regulations have developed as two distinct areas with little interface with each other

As the GATT WTO emerged in parallel to the LOS Convention since the 1970s both bodies have made extensive efforts in international treaty making. However, the relationship between trade regulations and the law of the sea has hardly been explored. The author examines some key aspects of this relationship in particular port entry, access to cargo in coastal shipping, cabotage and access to cargo in international shipping. The inclusion of services in WTO law will render this relationship of great importance in the future as the agreement extensively covers maritime transport. It is just a matter of time until the current exclusion of maritime transport under special exemptions will be reviewed in future negotiations. The book provides the background and a normative basis for approaching some of the problems which members of the WTO will have to address in coming years. It also deals briefly with the problem of choice of law and competing jurisdictions between trade law and maritime law.

Computational Logistics Jürgen W. Böse, Hao Hu, Carlos Jahn, Xiaoning Shi, Robert Stahlbock, Stefan Voß, 2011-09-25. This book constitutes the refereed proceedings of the Second International Conference on Computational Logistics ICCL 2011 held in Hamburg, Germany, in September 2011. The 26 revised full papers presented were carefully reviewed and selected from numerous submissions. The papers are organized in topical sections on transport services, logistics systems and production, and maritime shipping and container terminals.

Maritime Mobilities Jason Monios, Gordon Wilmsmeier, 2017-12-01. The central concerns of mobilities research, exploring the broader context and human aspects of movement, are fundamental to an understanding of the maritime freight transport sector. Challenges to the environment, attempts at more sustainable practices, changes in the geoeconomic system, political power, labour, economic development, and governance issues are all among the topics covered in this book. The aim of this volume is to address issues of maritime transport not only in the simple context of movement but within the mobilities paradigm. The goal is to examine negative system effects caused by blockages and inefficiencies, examine delays and wastage of resources, identify negative externalities, explore power relations, and identify the winners and losers in the globalised trade system with a particular focus on the maritime network. Maritime Mobilities therefore aims to build a bridge between traditional maritime academic approaches and the mobilities paradigm. This volume is of great importance to those who study industrial economics, shipping industries, and transport geography.
