Superintendent of Documents, 1966 Behavior of Marine Animals Joanna Burger, Bori L. Olla, Howard E. Winn, 2013-11-21 The majority of the chapters in this volume are structured to include a balance between literature review original data and synthesis The research approaches taken by the authors are generally of two kinds One centers on the long term in depth study of a single species in which many aspects of its natural history are examined in detail The other is a comparative one which involves investigating particular questions by examining species or by comparing groups of species that may include taxonomic and/or ecological affinities Most of the chapters concern obvious aspects of breeding behavior including habitat selection the effects of age on breeding communication mating systems synchrony of breeding activities development of behavior pre fledging parental care and post fledging parental care Of these topics many relate directly to the advantages and disadvantages of coloniality a conspicuous behavior pattern in marine birds As such they provide a picture for the further study of coloniality and the social behavior of many other animals Other important areas of marine bird breeding behavior such as courtship behavior antipredator behavior information transfer have not been included because of space limitations Since man's encroachment on the seashore and continental shelf poses certain threats to marine birds a volume elucidating various aspects of their biology has multiple uses As well as being of value to ornithologists the volume should be useful to managers involved with coastal planning
