Search Algorithms and Applications Nashat Mansour, 2011-04-26 Search algorithms aim to find solutions or objects with specified properties and constraints in a large solution search space or among a collection of objects A solution can be a set of value assignments to variables that will satisfy the constraints or a sub structure of a given discrete structure In addition there are search algorithms mostly probabilistic that are designed for the prospective quantum computer This book demonstrates the wide applicability of search algorithms for the purpose of developing useful and practical solutions to problems that arise in a variety of problem domains Although it is targeted to a wide group of readers researchers graduate students and practitioners it does not offer an exhaustive coverage of search algorithms and applications. The chapters are organized into three parts Population based and quantum search algorithms Search algorithms for image and video processing and Search algorithms for engineering applications Knowledge-Based and Intelligent Information and Engineering Systems, Part III Andreas König, Andreas Dengel, Knut Hinkelmann, Koichi Kise, Robert J. Contemporary Ergonomics S. Robertson, 2003-09-02 This is a volume in the international Contemporary Ergonomics series which forms a record of the proceedings of the Annual Conference of the Ergonomics Society held at Warwick in 1994 The refereed contributions cover the full spectrum of current experience and practice in ergonomics and its relevance to the workplace industry transport the home and leisure pursuits The keynote address is entitled Function Allocation in Manufacturing by Colin G Drury of the State University of New York USA Visual Perception for Humanoid Robots David Israel González Aguirre, 2018-09-01 This book provides an overview of model based environmental visual perception for humanoid robots The visual perception of a humanoid robot creates a bidirectional bridge connecting sensor signals with internal representations of environmental objects The objective of such perception systems is to answer two fundamental questions What where is it To answer these questions using a sensor to representation bridge coordinated processes are conducted to extract and exploit cues matching robot s mental representations to physical entities These include sensor actuator modeling calibration filtering and feature extraction for state estimation. This book discusses the following topics in depth Active Sensing Robust probabilistic methods for optimal high dynamic range image acquisition are suitable for use with inexpensive cameras This enables ideal sensing in arbitrary environmental conditions encountered in human centric spaces The book quantitatively shows the importance of equipping robots with dependable visual sensing Feature Extraction Recognition Parameter free edge extraction methods based on structural graphs enable the representation of geometric primitives effectively and efficiently This is done by eccentricity segmentation providing excellent recognition even on noisy

low resolution images Stereoscopic vision Euclidean metric and graph shape descriptors are shown to be powerful mechanisms for difficult recognition tasks Global Self Localization Depth Uncertainty Learning Simultaneous feature matching for global localization and 6D self pose estimation are addressed by a novel geometric and probabilistic concept using intersection of Gaussian spheres The path from intuition to the closed form optimal solution determining the robot location is described including a supervised learning method for uncertainty depth modeling based on extensive ground truth training data from a motion capture system The methods and experiments are presented in self contained chapters with comparisons and the state of the art The algorithms were implemented and empirically evaluated on two humanoid robots ARMAR III A B The excellent robustness performance and derived results received an award at the IEEE conference on humanoid robots and the contributions have been utilized for numerous visual manipulation tasks with demonstration at distinguished venues such as ICRA CeBIT IAS and Automatica Foundations of Sensation and Perception George Mather.2016-08-12 Do you wonder how movies sequences of static frames appear to move or why 3 D films look different from traditional movies Why does ventriloguism work and why can airliner flights make you feel disoriented The answers to these and other questions about the human senses can be found within the pages of Foundations of Sensation and Perception This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions making it suitable for a wide range of students As in the previous editions the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems smell taste touch and balance before moving on to more complex material in hearing and vision The text has been extensively updated and this new edition includes a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved more colorful visual presentation a new companion website with a range of resources for students and lecturers The book contains a range of pedagogical features including tutorial sections at the end of each chapter This distinctive feature introduces areas of the subject which are rarely included in student texts but are crucial for establishing a firm foundation of knowledge Some tutorials are devoted to more advanced and technical topics optics light measurement Bayesian inference but treated in an accessible manner while others cover topics a little outside of the mainstream music perception consciousness visual art Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology neuroscience and related disciplines From Perception to Consciousness Jeremy Wolfe, Lynn Robertson, 2012-05-24 This volume includes seminal articles published throughout Anne Treisman's scientific career which are accompanied by chapters from key figures in the field today These demonstrate the breadth and depth of her influence on research and theory from psychology to vision and auditory sciences Microsoft Visio 2013 Step By Step Scott A.
