**Search Theory** David V. Chudnovsky, Gregory V. Chudnovsky, 2023-05-09 On the solution of an optimal search problem with an exponential detection function Covers one and two sided detection problems by furnishing continuous and discrete time strategies examines two sided search strategies with solutions in hide and seek games in many discrete and continuous bounded Search Theory Steve Alpern, Robbert Fokkink, Leszek Gąsieniec, Roy Lindelauf, V.S. Subrahmanian, 2014-07-08

Search games and rendezvous problems have received growing attention in computer science within the past few years Rendezvous problems emerge naturally for instance to optimize performance and convergence of mobile robots This gives a new algorithmic point of view to the theory Furthermore modern topics such as the spreading of gossip or disease in social networks have lead to new challenging problems in search and rendezvous **Search Theory A Game Theoretic Perspective** introduces the first integrated approach to Search and Rendezvous from the perspectives of biologists computer scientists and mathematicians This contributed volume covers a wide range of topics including rendezvous problems and solutions rendezvous on graphs search games on biology mobility in governed social networks search and security and more Most chapters also include case studies or a survey in addition to a chapter on the future direction of Search and Rendezvous research This book targets researchers and practitioners working in computer science mathematics and biology as a reference book Advanced level students focused on these fields will also find this book valuable as a secondary text book or reference **Some Recent Developments in Statistical Theory and Applications** Kuldeep Kumar, Anoop

Alpern, Shmuel Gal, 2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero

sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the ze sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem **partial**
