**Search in Artificial Intelligence** Leveen Kanal,Vipin Kumar,2012-12-06 Search is an important component of problem solving in artificial intelligence AI and more generally in computer science engineering and operations research Combinatorial optimization decision analysis game playing learning planning pattern recognition robotics and theorem proving are some of the areas in which search algorithms play a key role Less than a decade ago the conventional wisdom in artificial intelligence was that the best search algorithms had already been invented and the likelihood of finding new results in this area was very small Since then many new insights and results have been obtained For example new algorithms for state space AND OR graph and game tree search were discovered Articles on new theoretical developments and experimental results on backtracking heuristic search and constraint propagation were published The relationships among various search and combinatorial algorithms in AI Operations Research and other fields were clarified This volume brings together some of this recent work in a manner designed to be accessible to students and professionals interested in these new insights and developments *Hands-On Artificial Intelligence for Search* Devangini Patel,2018-08-30 Make your searches more responsive and smarter by applying Artificial Intelligence to it Key Features Enter the world of Artificial Intelligence with solid concepts and real world use cases Make your applications intelligent using AI in your day to day apps and become a smart developer Design and implement artificial intelligence in searches Book Description With the emergence of big data and modern technologies AI has acquired a lot of relevance in many domains The increase in demand for automation has generated many applications for AI in fields such as robotics predictive analytics finance and more In this book you will understand what artificial intelligence is It explains in detail basic search methods Depth First Search DFS Breadth First Search BFS and A Search which can be used to make intelligent decisions when the initial state end state and possible actions are known Random solutions or greedy solutions can be found for such problems But these are not optimal in either space or time and efficient approaches in time and space will be explored We will also understand how to formulate a problem which involves looking at it and identifying its initial state goal state and the actions that are possible in each state We also need to understand the data structures involved while implementing these search algorithms as they form the basis of search exploration Finally we will look into what a heuristic is as this decides the quality of one sub solution over another and helps you decide which step to take What you will learn Understand the instances where searches can be used Understand the algorithms that can be used to make decisions more intelligent Formulate a problem by specifying its initial state goal state and actions Translate the concepts of the selected search algorithm into code Compare how basic search algorithms will perform for the application Implement algorithmic programming using code examples Who this book is for This book is for developers who are keen to get started with Artificial Intelligence and develop practical AI based applications Those developers who want to upgrade their normal applications to smart and intelligent versions will find this book useful A

Dilligan,2007-05-08 This book reflects thirty years of experience in the applications of computer technology to literary research and instruction and in consulting work in office automation and system integration In that time I have again and again found myself in the position of having to introduce students both undergraduate and graduate colleagues and clients to the fundamentals of computer hardware and software Over the years as computers became both central and commonplace in professional life I have been aware of changing attitudes toward this technology From attitudes that ranged from the disdain

of platonic dialecticians for mere technology to intimidation bordering at times almost on terror people have moved to incorporate this new technology into their frame of reference humani nil a me alienum The development of the microprocessor and its subsequent use for word processing marked one important watershed The widespread use of word processors made it more likely than not that people would own their own computers at least at work and use them as part of their work a day activities But while word processing provided some increased familiarity with computers it did not lead most individuals much beyond a knowledge of the usual incantations needed to control the MultiMate or Nota Bene or Word Perfect golam and as a result of unhappy experience a begrudging acceptance of the need to make back up copies of important files

**Artificial Intelligence in Marketing** IntroBooks Team, Artificial intelligence in marketing which is commonly known as AI Marketing is a process of striking a chord of linkage between customer statistics and artificial intelligence hypotheses It is basically an automated learning curve for a business house on the marketing front such that it can predict a customer's ongoing move and the next phase of action By doing so a business entity can easily amplify its outlook in the interests of the customer which in turn displays the quality of relevant products or services in an intelligent manner to reach a larger audience Due to the emergence of artificial intelligence marketing solutions an effective recourse is seen apparent in terms of bonding between scientific data points which are amassed industriously for subsequent implementation In other words the erstwhile process of manual hard work of assembling and analyzing a colossal quantum of data has surely become a thing of the past
