Buck, Richard Langan, 2017-04-06 This book is open access under a CC BY 4.0 license This volume addresses the potential for combining large scale marine aquaculture of macroalgae molluscs crustaceans and finfish with offshore structures primarily those associated with energy production such as wind turbines and oil drilling platforms The volume offers a comprehensive overview and includes chapters on policy science engineering and economic aspects to make this concept a reality The compilation of chapters authored by internationally recognized researchers across the globe addresses the theoretical and practical aspects of multi use and presents case studies of research development and demonstration scale installations in the US and EU **Seaweeds as Plant Fertilizer, Agricultural Biostimulants and Animal Fodder** Leonel Pereira, Kiril

Bahcevandziev, Nilesh H. Joshi, 2019-10-18 The main effects of Seaweed extracts Ascophyllum Fucus Sargassum Saccorhiza Laminaria Gelidium and others when used as agricultural fertilizers are better seed germination and higher quality fruit production with longer shelf life better use of soil nutrients more productive crops and plants with greater resistance to unfavorable environmental conditions Algae also have a long history of use as animal feed They have a highly variable composition depending on the species collection season and habitat and on external conditions such as water temperature light intensity and nutrient concentration in water In relation to ruminal fermentation a high variability of the digestibility values was found among seaweed species and cannot be attributed only to the composition of different nutrients of the algae The role of marine algae for reduction of methane production is discussed with particular emphasis on novel algae based feed strategies that target minimal methane emissions without affecting the functionality of the microbiota and overall animal productivity Key Features Sustainable Agriculture Natural Feeding Nutrients Liquid Seaweed Agricultural Biostimulants Natural Pesticides **Seaweed Sustainability** Brijesh K. Tiwari, 2015-08-27 Seaweed Sustainability Food and Non Food Applications is the only evidence based resource that offers an abundance of information on the applications of seaweed as a solution to meet an increasing global demand for sustainable food source The book uncovers seaweed potential and describes the various sources of seaweed the role of seaweeds as a sustainable source for human food and animal feeds and the role of seaweed farming for sustainability In addition to harvesting and processing information the book discusses the benefits of

seaweed in human nutrition and its nutraceutical properties Offers different perspectives by presenting examples of commercial utilization of wild harvested or cultivated algae marine and freshwater seaweeds Discusses seasonal and cultivar variations in seaweeds for a better understanding of their implications in commercial applications Includes a wide range of micro and macro algae for food and feed production and provides perspectives on seaweed as a potential energy source

Bioenergy Production by Anaerobic Digestion Nicholas Korres, Pdraig O'Kiely, John A.H. Benzie, Jonathan S. West, 2013-08-29 Interest in anaerobic digestion AD the process of energy production through the production of biogas has increased rapidly in recent years Agricultural and other organic waste are important substrates that can be treated by AD This book is one of the first to provide a broad introduction to anaerobic digestion and its potential to turn agricultural crops or crop residues animal and other organic waste into biomethane The substrates used can include any non woody materials including grass and maize silage seaweeds municipal and industrial wastes These are all systematically reviewed in terms of their suitability from a biological technical and economic perspective In the past the technical competence and high capital investment required for industrial scale anaerobic digesters has limited their uptake but the authors show that recent advances have made smaller scale systems more viable through a greater understanding of optimising bacterial metabolism and productivity Broader issues such as life cycle assessment and energy policies to promote AD are also discussed
