summarizes the geomorphology geology geochronology geophysics and mineral resources of the Congo Basin one of the
world's most enigmatic and poorly understood major intra continental sedimentary basins and its flanking areas of Central
Africa It provides an up to date analysis of the large region's origin and evolution The book's nineteen chapters take the

Archean cratons and Proterozoic mobile belts and proceeding through the Phanerozoic sequences including the most recent
Cenozoic successions the book also explores the present drainage systems and the subtle but complex topography of the
Congo Basin It also presents and evaluates new basin models and related dynamic processes as well as revised correlation
schemes with its Gondwana counterparts in South America all of which provide key insights into its rich diamond deposits
and other mineral wealth which are documented in the final chapters A specific feature of this book is its synthesis
performed by teams of active experts of a vast amount of geoscientific data previously only recorded in research reports
company reports survey bulletins and scattered journal articles and books The sheer size of the Congo Basin ca 1.8 million
