A Manual of Nature Conservation Law Michael Fry, 2008 *Manual of European Environmental Law* Alexandre Kiss, Dinah Shelton, 1997-10-02 Wild Fauna and Flora **Urban Environments and Wildlife Law** Paul A. Rees, 2008-04-15

Today construction industry is being asked more and more to protect the quality of the countryside and to help enhance our natural environment. The industry is subject to a complex and wide ranging regulatory framework; it now needs to understand its responsibilities and take them seriously. Paul Rees provides here an authoritative guide outlining wildlife and nature conservation law in the UK including our European and international commitments and giving clear explanations to a potentially costly area of law in a style accessible to the non legal market. This comprehensive manual offers information and guidance for building surveyors, environmental managers, engineers and planners on the legal and planning issues around biodiversity, nature conservation and construction, how ecosystems work and why certain species and habitats need protection, where to go for the relevant legislation and appropriate organisations for help and advice. UK and European case law demonstrates how the law has functioned in particular instances and case studies illustrate how companies have adapted to fulfil their legal obligations. These are key features of the book and provide information on important legal precedents as well as demonstrating current industry best practice.

Rethinking the Concept of Law of Nature Yemima Ben-Menahem, 2022-06-13. This book subjects the traditional concept of law of nature to critical examination. There are two kinds of reasons that invite this reexamination: one deriving from

philosophical concerns over the traditional concept the other motivated by theoretical and practical changes in science One of the philosophical worries is that the idiom of law of nature especially when combined with the notion of laws governing individual events and processes is no longer as intelligible as it used to be in the theistic context in which the formulation of laws became central to science The traditional concept is also challenged in various ways by contemporary scientific theories such as quantum mechanics chaos theory and the general theory of relativity It is no longer clear that there are any universal laws laws do not always guarantee predictability and the border between physical and mathematical considerations is constantly shifting The most difficult challenge perhaps is to come up with a scientific explanation of the origin of laws Wrestling with these intriguing problems the papers in this volume broaden both our understanding of the natural order and our desiderata of scientific explanation
