Value Management Roger H. Davies, 2016-02-17 Change programmes in both private and public sectors have a poor record of delivering their intended value The reasons given most often for their failure include lack of executive support or buy in from key users loose requirements definition weak programme management and plain wishful thinking They rarely include technical limitations Value Management puts forward the view that the true problem lies in failing to understand the causal links between the intended stakeholder outcomes and the actual programme outputs Repeating the pattern of failure can be avoided by asking two questions Before implementation what capabilities must a change programme deliver when and in what order so as to cause intended value against a defined purpose with speed and certainty During and after implementation what minor adjustments and or major shifts are needed to be certain that the programme remains on purpose and on value and two answers to be given Target time and align change programmes to deliver maximum intended value to stakeholders the baseline business case track and respond to changes during and beyond implementation to ensure that the programme actually delivers or exceeds intended value value realisation The authors show how by asking and answering these questions direction and delivery of any programme can be clarified and greater economic value achieved

Beyond the Metropolis Louise Young,2013-04-15 In Beyond the Metropolis Louise Young looks at the emergence of urbanism in the interwar period a global moment when the material and ideological structures that constitute the city took their characteristic modern shape In Japan as elsewhere cities became the staging ground for wide ranging social cultural economic and political transformations The rise of social problems the formation of a consumer marketplace the proliferation of streetcars and streetcar suburbs and the cascade of investments in urban development reinvented the city as both socio spatial form and set of ideas Young tells this story through the optic of the provincial city examining four second tier cities Sapporo Kanazawa Niigata and Okayama As prefectural capitals these cities constituted centers of their respective regions All four grew at an enormous rate in the interwar decades much as the metropolitan giants did In spite of their commonalities local conditions meant that policies of national development and the vagaries of the business cycle affected individual cities in diverse ways As their differences reveal there is no single master narrative of twentieth century modernization By engaging urban culture beyond the metropolis this study shows that

Japanese modernity was not made in Tokyo and exported to the provinces but rather co constituted through the circulation and exchange of people and ideas throughout the country and beyond

Transformation of the Electric Utility Business Model John Manshreck, 2021-11-22 This book examines business model transformation through the study of electrical utilities an industry at the center of today s efforts to combat climate change When change comes to the business model of such a mature industry the pattern is often recognizable The foundational elements of the industry shift allowing the innovation of business models by new competitors while established firms face the threat of disruption The utility sector after decades of relative stability is in the midst of such a transformation today After providing a historical summary of the dominant business models of the utility sector Transformation of the Electric Utility Business Model looks at the factors currently impacting the industry Utilities and policy makers today are facing two long term issues that will dominate their agendas in the coming decades rebuilding utility infrastructure to enable the decarbonization of the economy and managing the risk of catastrophic events that can leave large areas without power for extended periods Fortunately with proper planning many utility investments in decarbonization will also support risk management However these investments are often not compatible with current utility business models requiring creativity and new regulatory frameworks to successfully implement This book considers the impact of these factors and then discusses the future This well researched extremely insightful book is essential reading for all those with an interest in business strategy energy studies and sustainability
