Mapping And Spatial Modelling For Navigation:

Mapping and Spatial Modelling for Navigation Louis F. Pau, 2012-12-06 The successful implementation of applications in spatial reasoning requires paying attention to the representation of spatial data In particular an integrated and uniform treatment of different spatial features is necessary in order to enable the reasoning to proceed quickly Currently the most prevalent features are points rectangles lines regions surfaces and volumes As an example of a reasoning task consider a query of the form find all cities with population in excess of 5 000 in wheat growing regions within 10 miles of the Mississippi River Note that this query is quite complex It requires processing a line map for the river creating a corridor or buffer to find the area within 10 miles of the river a region map for the wheat and a point map for the cities Spatial reasoning is eased by spatially sorting the data i e a spatial index In this paper we show how hierarchical data structures can be used to facilitate this process They are based on the principle of recursive decomposition similar to divide and conquer methods In essence they are used primarily as devices to sort data of more than one dimension and different spatial types The term quadtree is often used to describe this class of data structures In this paper we focus on recent developments in the use of quadtree methods We concentrate primarily on region data For a more extensive treatment of this subject see SameS4a SameSSa SameSSb SameSSc SameSga SameSgbj *Mapping and Spatial Modelling for Navigation* L. F. Pau, 1989 The Construction of Cognitive Maps Juval Portugali, 2007-08-23 and processes which are exclusive to humans in their encoding storing decoding and retrieving spatial knowledge for various tasks The authors present and discuss connectionist models of cognitive maps which are based on local representation versus models which are based on distributed representation as well as connectionist models concerning language and spatial relations As is well known Gibson s 1979 ecological approach suggests a view on cognition which is diametrically different from the classical main stream view perception and thus cognition is direct immediate and needs no internal information processing and is thus essentially an external process of interaction between an organism and its external environment The chapter by Harry Heft introduces J J Gibson s ecological approach and its implication to the construction of cognitive maps in general and to the issue of wayfinding in particular According to Heft main stream cognitive sciences are essentially Cartesian in nature and have not as yet internalized the implications of Darwin s theory of evolution Gibson in his ecological approach has tried to do exactly this The author introduces the basic terminology of the ecological approach and relates its various notions in particular optic flow nested hierarchy and affordances to navigation and the way routes and places in the environment are learned **Springer Handbook of Geographic Information** Wolfgang Kresse, David M. Geospatial Analytics for Environmental Pollution Modeling Fayma Mushtaq, Majid Farooq, Alok Bhushan Mukherjee, Mili Ghosh Nee Lala, 2023-12-01 This book aims to provide a comprehensive study on various aspects of environmental pollution dynamics using geospatial technology and modeling techniques. The utility of geospatial technology will be demonstrated for the effective study of environmental pollution, as space and location are very important for effective environmental health surveillance. The timeliness of the work is due to the increasing relevance of geospatial technology applications in environmental health investigations. Moreover, different types of pollution are covered in detail, including air and soil, all of which are analyzed using latest Remote Sensing and GIS technology. The basics of environmental pollution and its impacts are covered in the book's first part, while the second part focuses on the use of geospatial technology in investigating and modeling various instances of environmental pollution. The third part discusses policy measures for mitigating environmental pollution hazards using geospatial analyses and data to craft informed policy decisions. The primary audience for the book is researchers working in the field of environmental pollution, with incorporation of geospatial technology, including upper-level undergraduate and graduate students taking courses in remote sensing and its environmental applications. The secondary audience is academicians, planners, environmentalists, and policymakers working in the field of environment protection and management.
