Mathematics M.A. (Ken) Clements, Nerida F. Ellerton, 2014-11-19 This well illustrated book by two established historians of school mathematics documents Thomas Jefferson s quest after 1775 to introduce a form of decimal currency to the fledgling United States of America The book describes a remarkable study showing how the United States decision to adopt a fully decimalized carefully conceived national currency ultimately had a profound effect on U S school mathematics curricula The book shows by analyzing a large set of arithmetic textbooks and an even larger set of handwritten cyphering books that although most eighteenth and nineteenth century authors of arithmetic textbooks included sections on vulgar and decimal fractions most school students who prepared cyphering books did not study either vulgar or decimal fractions In other words author intended school arithmetic curricula were not matched by teacher implemented school arithmetic curricula Amazingly that state of affairs continued even after the U S Mint began minting dollars cents and dimes in the 1790s In U S schools between 1775 and 1810 it was often the case that Federal money was studied but decimal fractions were not That gradually changed during the first century of the formal existence of the United States of America By contrast Chapter 6 reports a comparative analysis of data showing that in Great Britain only a minority of eighteenth and nineteenth century school

students studied decimal fractions Clements and Ellerton argue that Jefferson's success in establishing a system of decimalized Federal money had educationally significant effects on implemented school arithmetic curricula in the United States of America The lens through which Clements and Ellerton have analyzed their large data sets has been the lag time theoretical position which they have developed That theory posits that the time between when an important mathematical discovery is made or a concept is created and when that discovery or concept becomes an important part of school mathematics is dependent on mathematical social political and economic factors Thus lag time varies from region to region and from nation to nation Clements and Ellerton are the first to identify the years after 1775 as the dawn of a new day in U S school mathematics traditionally historians have argued that nothing in U S school mathematics was worthy of serious study until the 1820s This book emphasizes the importance of the acceptance of decimal currency so far as school mathematics is concerned It also draws attention to the consequences for school mathematics of the conscious decision of the U S Congress not to proceed with Thomas Jefferson's grand scheme for a system of decimalized weights and measures
