consumption for example NGOs who develop green energy labelling schemes in collaboration with producers and regulators to guide the user consultants who advise businesses on how to save resources and travel agents who match users with providers Such intermediaries are in a position to shape the direction that technological transitions take and ultimately the sustainability of urban networks This book presents the first authoritative collection of research and analysis of the intermediaries that underpin the transitions that are taking place within urban infrastructures showing how intermediaries emerge the role that they play in key sectors including energy water waste and building and what impact they have on the governance of urban socio technical networks
