Mantle Dynamics and Plate Interactions in East Asia Martin F. J. Flower, 1998-02-04 Published by the American Geophysical Union as part of the Geodynamics Series Volume 27 Geophysical imaging techniques and petrologic probes are yielding dramatic new evidence of the structure and dynamic impact of mantle on plate kinematics The thin viscous sheet and extrusion tectonics models explain much of Asian geology in terms of the Indo Eurasian collision Enigmatic features remain however including the rapid post Mesozoic formation of western Pacific marginal basins widespread postextrusion basalt and shoshonite magmatism and the presence of isotopically anomalous asthenosphere beneath the region The Tectonics of China Tianfeng Wan, 2012-01-19 The Tectonics of China Data Maps and Evolution presents the regional geological and petroleum surveys of China the author's original tectonic data and research results of Chinese and international scientists more than 1500 references from the last three decades It examines the main developments of geological evolution a series of tectonic events in the overall geological history 13 tectonic maps of the entire continent of Asia in different tectonic epochs and a general discussion of the main tectonic characteristics of the Chinese continental plate This book also intensively discusses the Mesozoic Cenozoic tectonics and intraplate deformations which control the majority of ore deposits and oil gas reservoirs and have a tremendous influence on the climates and natural disasters on the continent Some important tectonic theory problems are discussed such as the mechanisms of the widespread intraplate deformation the variation of lithosphere thickness the existence of mantle plumes the dynamic mechanisms for global tectonics and the author's proposed hypotheses on mantle plumes and meteorite impacts The book is intended for researchers and geologists working at universities on geological surveys for mining or petroleum companies and for graduate students of geology and mineral resources Tianfeng Wan is Professor at the China University of Geosciences Beijing China

Regional Geology and Tectonics: Phanerozoic Rift Systems and Sedimentary Basins David G. Roberts, 2012-04-23 Expert petroleum geologists David Roberts and Albert Bally bring you Regional Geology and Tectonics Phanerozoic Rift Systems and Sedimentary Basins volume two in a three volume series covering Phanerozoic regional geology and tectonics Experience in analyzing and assessing rifts locations where the Earth's outer shell and crust have been stretched over time by seismic activity is critical for you as an exploration geologist in identifying Earth's most lucrative hydrocarbon locations in which extraction is both efficient and safe Vast compilations of related industry data present regional seismic lines and cross sections and summaries of analogue and theoretical models are provided as an essential backdrop to the structure and stratigraphy of various geological settings Named a 2013 Outstanding Academic Title by the American Library Association's Choice publication A practical reference for petroleum geologists that discusses the importance of rift systems and the structural evolution of the Earth Analyses of active rifts in East Africa China Siberia the Gulf of Suez and the Russian Arctic provide immediately implementable petroleum exploration applications in regions heavily targeted by oil gas companies

Foulger, Donna M. Jurdy, 2007 Presents a collection of papers discussing various hypotheses and models of planetary plumes **Petrology** Ali Al-Juboury, 2012-01-13 Petrology New Perspectives and Applications is designed for advanced graduate courses and professionals in petrology The book includes eight chapters that are focused on the recent advances and application of modern petrologic and geochemical methods for the understanding of igneous metamorphic and even sedimentary rocks Research studies contained in this volume provide an overview of application of modern petrologic techniques to rocks of diverse origins They reflect a wide variety of settings from South America to the Far East and from Africa to Central Asia as well as ages ranging from late Precambrian to late Cenozoic with several on Mesozoic Cenozoic volcanism **Continents and Supercontinents** John J. W. Rogers, M. Santosh, 2004-09-16 Surveys the origin of continents and the accretion and breakup of supercontinents through earth history This book also shows how these processes affected the composition of seawater climate and the evolution of life **Regional Geology and Tectonics** David G. Roberts, A.W. Bally, 2012-12-31 Volume 1A Principles of Geologic Analysis A how to primer describes the basic concepts petroleum geologists and students need to understand hydrocarbon exploration in a broad range of geological settings globally Volume 1B Phanerozoic Rift Systems and Sedimentary Basins Incorporates industry data to present regional seismic lines and cross sections to accurately document and analyze proven hydrocarbon systems It also includes summaries of analogue and theoretical models as an essential backdrop to the structure and stratigraphy of a variety of geological settings Volume 1C Phanerozoic Passive Margins Cratonic Basins and Global Tectonic Maps Focuses on both volcanic and non volcanic passive margins as well as cratonic basins critical habitats for hydrocarbons It provides a unique basis for comparison of different passive margins and for an understanding of their structural and stratigraphic evolution as well as their petroleum systems especially useful to explorationists working in deep water basins and researchers examining the tectonic evolution of the continent ocean transition A vast amount of data to enable hydrocarbon play assessments and analysis on passive margins is also included in this thorough yet accessible reference Individual volumes can also be purchased 9780444530424 9780444563569 9780444563576 Volume 1A discusses in detail the principles of regional geological analysis

Malpas, 2004 This volume provides accounts of up to date research by Chinese and international geological teams on key aspects of the tectonic evolution of China and its surrounding areas The papers describe the formation of the geological terranes that make up this part of east Asia place constraints on plate tectonic models for their assembly and provide accounts of unique geological feature of the subcontinent

Superplumes: Beyond Plate Tectonics David A. Yuen, Shigenori Maruyama, Shun-ichiro Karato, Brian F. Windley, 2007-06-29 This abundantly illustrated book provides a concise overview of our understanding of the entire mantle its evolution since early differentiation and the consequences of superplumes for earth surface processes The book s balanced authorship has produced a state of the science report on the emerging concept of superplumes This presents a new concept to explain catastrophic events on Earth through geologic time

Tectonics Damien Closson, 2011-02-28 The term tectonics refers to the study dealing with the forces and displacements that have operated to create structures within the lithosphere The deformations affecting the Earth s crust are result of the release and the redistribution of energy from Earth s core The concept of plate tectonics is the chief working principle Tectonics has application to lunar and planetary studies whether or not those bodies have active tectonic plate systems Petroleum and mineral prospecting uses this branch of knowledge as guide The present book is restricted to the structure and evolution of the terrestrial lithosphere with dominant emphasis on the continents Thirteen original scientific contributions highlight most recent developments in seven relevant domains Gondwana history the tectonics of Europe and the Near East the tectonics of Siberia the tectonics of China and its neighbourhood advanced concepts on plate tectonics are discussed in two articles in the frame of neotectonics two investigation techniques are examined finally the relation between tectonics and petroleum researches is illustrated in one chapter

Continental Intraplate Earthquakes Seth Stein, Stéphane Mazzotti, 2007-01-01 This volume brings together a sampling of research addressing issues of continental intraplate earthquakes including a core of papers from special sessions held at the spring 2004 Joint Assembly of the American and Canadian Geophysical Unions in Montreal Papers address the broad related topics of the science hazard and policy issues of large continental intraplate

earthquakes in a worldwide context One group of papers addresses aspects of the primary scientific issue where are these earthquakes and what causes them Answering this question is crucial to determining whether they will continue there or migrate elsewhere A second group of papers addresses the challenge of assessing the hazard posed by intraplate earthquakes Although it may be a very long time before the scientific issues are resolved the progress being made is helping attempts to estimate the probability size and shaking of future earthquakes and the uncertainty of the results A third group of papers explores the question of how society should mitigate the possible effects of future large continental intraplate earthquakes Communities around the world face the challenge of deciding how to address this rare but real hazard given the wide range of other societal needs Continental intraplate earthquakes will remain a challenge to seismologists earthquake engineers policy makers and the public for years to come but significant progress toward understanding and addressing this challenge is now being made Publisher s website
