Many Skies Alternative Histories Of The Sun Moon Planets And Stars:

Many Skies Arthur R. Upgren, 2005 From fanciful to foreboding the scenarios in this work will both delight and inspire reflection reminding readers that their view of the universe is as much a product of accident as it is of intention **Many Skies** Arthur Upgren, 2005-01-18 What if Earth had several moons or massive rings like Saturn What if the Sun were but one star in a double star or triple star system What if Earth were the only planet circling the Sun These and other imaginative scenarios are the subject of Arthur Upgren's inventive book *Many Skies Alternative Histories of the Sun Moon Planets and Stars* Although the night sky as we know it seems eternal and inevitable Upgren reminds us that just as easily it could have been very different Had the solar system happened to be in the midst of a star cluster we might have many more bright stars in the sky Yet had it been located beyond the edge of the Milky Way galaxy we might have no stars at all If Venus or Mars had a moon as large as ours we would be able to view it easily with the unaided eye Given these or other alternative skies what might Ptolemy or Copernicus have concluded about the center of the solar system and the Sun This book not only examines the changes in science that these alternative solar stellar and galactic arrangements would have brought it also explores the different theologies astrologies and methods of tracking time that would have developed to reflect them Our perception of our surroundings the number of gods we worship the symbols we use in art and literature even the way we form nations and empires are all closely tied to our particular and accidental placement in the universe *Many Skies* however is not merely a fanciful play on what might have been Upgren also explores the actual ways that human interferences such as light pollution are changing the night sky Our atmosphere he warns will appear very different if we have a belt of debris circling the globe and blotting out the stars as will happen if advertisers one day pollute space with brilliant satellites displaying their products From fanciful to foreboding the scenarios in *Many Skies* will both delight and inspire reflection reminding us that ours is but one of many worldviews based on our experience of a universe that is as much a product of accident as it is of intention *Apollo's Fire* Michael Sims, 2008-11-25 It's the oldest story on Earth You relive it every day So much of our shared daily experience in the world is shaped by the sometimes dramatic sometimes subtle effects of the Earth's spin its tilt on its axis the alternation of light and darkness the waxing and waning of the moon the seemingly capricious growth of clouds The ancient rhythm of the day and night was shaping life on Earth before there were even human beings to appreciate it It rules our bodies and weather and calendars and sets the tempo for our work and play Each of us awakens each day to relive this primordial narrative With his signature blend of science and poetry history and mythology Michael Sims serves as tour guide on an unforgettable journey through the wonders of an ordinary day from dawn to nighttime Long before we had the tools of knowledge to explain what we observed in the skies overhead we built mythologies and folklore around these occurrences immortalized them in poetry and art created special places for them in our collective imagination and even our language In *Apollo's Fire* Sims explores the celestial events that form our days fusing lively

explanations of these phenomena with a richly layered history of what they meant to us before we knew how they worked He explains the colors of sunrise the characteristics of shadow the mysteries of twilight Characters in this vital drama include Galileo watching sunrise on the moon Eratosthenes measuring the Earth with a noontime shadow and Edgar Allan Poe figuring out why the night sky is dark instead of glowing with the light of a million suns Our story ranges from the movie High Noon to Darwin's plant experiments from The Time Machine to the afternoon rise in air pollution In the witty and elegant style that has earned him the designation science raconteur Sims weaves a dazzling array of strands into a single tapestry of daily experience and makes the oldest story on Earth new again **Apocalypse 2012** Lawrence E.

Joseph,2007-01-23 Updated to include dramatic new evidence from NASA and the National Academy of Sciences pointing to a knockout of the electrical power grid by solar systems expected to climax in 2012 2013 Don't look up It won't help You can't get out of the way you can't dig a hole deep enough to hide The end is coming and there's nothing you can do about it So why read this book Because you can't look away when not just the religious fanatics are saying we're all going to be destroyed but the scientists are in on the act too Here's what they're saying We're a million years over due for a mass extinction The sun at radiation minimum is acting much worse than at solar maximum and one misdirected spewing of plasma could fry us in an instant The magnetic field which shields us from harmful radiation is developing a mysterious crack Our solar system is entering an energetically hostile part of the galaxy The Yellowstone supervolcano is getting ready to blow and if it does we can look forward to nuclear winter and 90 percent annihilation The Maya the world's greatest timekeepers ever say it's all going to stop on December 21 2012 So see There's nothing you can do but you might as well sit back and enjoy the show You'll get a good chuckle That's why you should read this book Until Shiloh Comes John
