Animal Sonar Systems R. Busnel, 2013-06-29 Thirteen years have gone by since the first international meet ing on Animal Sonar Systems was held in Frascati Italy in 1966 Since that time almost 900 papers have been published on its theme The first symposium was vital as it was the starting point for new research lines whose goal was to design and develop technological systems with properties approaching optimal biological systems There have been highly significant developments since then in all domains related to biological sonar systems and in their appli cations to the engineering field The time had therefore come for a multidisciplinary integration of the information gathered not only on the evolution of systems used in animal echolocation but on systems theory behavior and neurobiology signal to noise ratio masking signal processing and measures observed in certain species against animal sonar systems Modern electronics technology and systems theory which have been developed

only since 1974 now allow designing sophisticated sonar and radar systems applying principles derived from biological systems At the time of the Frascati meeting integrated circuits and technologies exploiting computer science were not well enough developed to yield advantages now possible through use of real time analysis leading to among other things a definition of target temporal characteristics as biological sonar systems are able to do All of these new technical developments necessitate close co operation between engineers and biologists within the framework of new experiments which have been designed particularly in the past five years **Technical Report - Hawaii Marine Laboratory** Hawaii Institute of Marine Biology, 1977 *Functional Biology of Clonal Animals* Roger Neville Hughes, 1989-10-31 Clonal animals that is those that are genetically identical are of great importance in biology The supposed evolutionary advantages of sexual versus asexual reproduction are one of the central paradoxes of current evolutionary theory The evolved strategy of asexual reproduction includes a large number of diverse species in many different groups for example aphids guppies planktonic rotifers and others *The Naturalist* ,1913
