Abstract. This article describes the method of mathematical statistics for studying the wear of parts of modern machines. It is examined how the service life of the parts is established. It was also assumed that the statistical data on the size of worn parts obey the law of normal distribution. The figure presented in the paper illustrates the scheme for determining the inter-repair service life of the part for this case according to statistical data. An example is considered that allows to establish the norm of the maintenance period of the support roller of a modern tractor VT-150. This article is recommended for agricultural specialists, researchers, teachers, postgraduates, undergraduates and students of agricultural universities in the field of training "Agroengineering".

1 Introduction

In recent years, methods of probability theory and mathematical statistics have been increasingly used in various fields of mechanical engineering and agriculture to study the wear of parts and interfaces of modern machines and mechanisms.

At the same time, it should be noted that probability theory is based on a number of basic concepts, with the help of which a logical definition of subsequent more complex ones is given.

The main concepts are an event and its quantitative characteristic – the probability of an event. An event is understood as any fact that may or may not occur as a result of an experiment, experiment or observation under a certain set of conditions.

For example, such random events as [1, 2, 3]:

- the measured value of the wear of the part is the result (outcome); the measurement operation performed is an event (test);
- overtaking a car on a selected road section (a set of conditions – the observed road section, the event is overtaking);
- failure-free operation of the car when running a certain mileage (condition – monitoring the operation of the car, event – failure-free operation);
- meeting an impassable area for the car (condition – studying the movement of the car, event – impassability of the car).
