Molecular And Supramolecular Chemistry Of Carbohydrates A Chemical Introduction To The Glycosciences:

Molecular And Supramolecular Chemistry Of Carbohydrates Serge David, 1998-01-01 NULL The Molecular and Supramolecular Chemistry of Carbohydrates Serge David, 1997 There is currently a great deal of interest in carbohydrate research among chemists and biologists in both academic and industrial laboratories One reason is the involvement of oligosaccharide molecules in many recognition phenomena in the living world Another reason is the growing demand for chiral synthesis sugars are an amazingly cheap source of chirality but must be efficiently processed Thirdly the role of conformation in carbohydrate interactions has stimulated much experimental and theoretical work There are causal links between advances in each of these fields from molecular orbitals to immunochemistry so that no research worker in his narrow specialisation can afford to ignore what is going on elsewhere Thus a body of knowledge has been built from what is now called the glycosciences This book attempts to describe glycosciences in their true perspective Organic chemistry is the backbone of the presentation but carbohydrate chemistry offers a wealth of supramolecular associations This book is unique among similar texts on carbohydrates in that half its content is devoted to the description of important examples of such interactions The opening chapters deal with the problems of configuration conformation derivatization and modifications of monosaccharides with examples on their utilization in total synthesis The anomeric effect the most popular of all stereoelectronic effects and a gift to carbohydrate chemists and chemists in general is discussed at length The following chapters deal with oligosaccharides the essentials of enzymic synthesis with its high performances and the sialic acids which are at the forefront of carbohydrate research The author describes recognition reactions including blood group phenomena interactions involving sialic acids the active site of heparin tumour markers and selectins The association of sugars with small molecules notably with inorganic species is the subject of another chapter Throughout the book great attention has been given to practical details especially in the description of experiments involving unfamiliar techniques Many tables figures diagrams experimental protocols and a survey of the literature up to March 1996 will help the reader to understand the salient facts and visualize a broad spectrum of ideas *Advances in Carbohydrate Chemistry and Biochemistry*, 2014-12-02 Since its inception in 1945 this serial has provided critical and informative articles written by research specialists that integrate industrial analytical and technological aspects of biochemistry organic chemistry and instrumentation methodology in the study of carbohydrates The articles provide a definitive interpretation of the current status and future trends in carbohydrate chemistry and biochemistry Features contributions from leading authorities and industry experts Informs and updates on all the latest developments in the field *Pharmaceutical Chemistry* Christine Bladon, 2002-04-03 Providing a broad introduction to the growing field this book explores the way in which peptides proteins nucleic acids and carbohydrates used therapeutically With help of numerous illustrations it covers both the compounds and how therapeutics exert their influence through an understanding of biological processes Includes the latest developments in

the field Covers the various strategies behind the development and production of a range of key clinically useful compounds Focuses on the concepts and ideas of why compounds are developed as pharmaceuticals Provides many examples and problems Invaluable to all students of chemistry medicinal and pharmaceutical chemistry pharmacy and pharmacology Will also be of interest to researchers and professionals needing a concise up to date account of this subject *Reagents for Glycoside, Nucleotide, and Peptide Synthesis* David Crich, 2005-10-21 This handbook collects together short informative articles on approximately 250 of the most widely used reagents in the field into a single volume Each of the articles drawn from the e EROS database contains a summary of the most pertinent reactions for every reagent with references to the original literature This handbook will have a broad appeal and should find a home in every organic chemistry laboratory and library Compiles all the essential reagents for syntheses on and with biomolecules Gives key information on protection bond formation and deprotection An essential resource for all synthetic chemists working in drug development and medicinal chemistry Makes use of the leading reagent database e EROS **Choice** ,1998 *Whitaker's Books in Print* ,1998

Cumulative Book Index ,1998 A world list of books in the English language **Domino and Intramolecular Rearrangement Reactions as Advanced Synthetic Methods in Glycoscience** Zbigniew J. Witczak, Roman Bielski, 2016-01-14 The book consists of a brief introduction a foreward provided by professor Danishefsky of Columbia University and about 14 16 chapters each written by one or two eminent scholars authors describing their recent research in the area of either domino reactions or intramolecular rearrangements in carbohydrate chemistry Three or four chapters will be reviews The domino cascade tandem reactions are always intramolecular They are usually very fast clean and offer highly complex structures in a one pot process Intramolecular rearrangements offer very similar advantages and often lead to highly complex products as well Although many recently isolated carbohydrates fulfill various sophisticated functions their structures are often very complex The editors cover the broadest scope of novel methodologies possible All the synthetic and application aspects of domino cascade reactions are explored in this book A second theme that will be covered is intramolecular rearrangement which is also fast stereoselective and often constitutes one or more steps of domino cascade process Selected examples of intramolecular rearrangements are presented Together both processes offer an elegant and convenient approach to the synthesis of many complex molecules which are normally difficult to synthesize via alternative routes It appears that domino and intramolecular rearrangements are ideally suited to synthesize certain specific modified monosaccharides What is particularly important is that both processes are intermolecular and almost always yield products with very well defined stereochemistry This high definition is absolutely crucial when synthesizing advanced modified mono and oligosaccharides The choice of contributors reflects an emphasis on both therapeutic and pharmacological aspects of carbohydrate chemistry **The British National Bibliography** Arthur James Wells, 1998 **International Bibliography of Book Reviews of Scholarly Literature Chiefly in the Fields of Arts and Humanities and the Social Sciences** ,1996

American Book Publishing Record ,1997-09 *Forthcoming Books* Rose Arny,1998-04 **Books in Print Supplement** ,2002 **Comprehensive Medicinal Chemistry III** ,2017-06-03 Comprehensive Medicinal Chemistry III Eight Volume Set provides a contemporary and forward looking critical analysis and summary of recent developments emerging trends and recently identified new areas where medicinal chemistry is having an impact The discipline of medicinal chemistry continues to evolve as it adapts to new opportunities and strives to solve new challenges These include drug targeting biomolecular therapeutics development of chemical biology tools data collection and analysis in silico models as predictors for biological properties identification and validation of new targets approaches to quantify target engagement new methods for synthesis of drug candidates such as green chemistry development of novel scaffolds for drug discovery and the role of regulatory agencies in drug discovery Reviews the strategies technologies principles and applications of modern medicinal chemistry Provides a global and current perspective of today s drug discovery process and discusses the major therapeutic classes and targets Includes a unique collection of case studies and personal assays reviewing the discovery and development of key drugs *Carbohydrate Chemistry* Yves Queneau,A Pilar Rauter,Thisbe Lindhorst,2014 Volume 40 of Carbohydrate Chemistry Chemical and Biological Approaches demonstrates the importance of the glycosciences for innovation and societal progress Carbohydrates are molecules with essential roles in biology and also serve as renewable resources for the generation of new chemicals and materials Honouring Professor Andr Lubineau s memory this volume resembles a special collection of contributions in the fields of green and low carbon chemistry innovative synthetic methodology and design of carbohydrate architectures for medicinal and biological chemistry Green methodology is illustrated by accounts on the industrial development of water promoted reactions C glycosylation cycloadditions and the design of green processes and synthons towards sugar based surfactants and materials The especially challenging transformations at the anomeric center are presented in several contributions on glycosylation methodologies using iron or gold catalysis electrochemical or enzymatic thio glycosylation exo glycal chemistry and bioengineering of carbohydrate synthases Then synthesis and structure of multivalent and supramolecular oligosaccharide architectures are discussed and related to their physical properties and application potential e g for deepening our understanding of biological processes such as enzymatic pathways or bacterial adhesion and design of antibacterial antifungal and innovative anticancer vaccines or drugs **Glycoscience: Chemistry and Chemical Biology I-III** Bertram O.
