Habits: plasticity, learning and freedom Javier Bernacer, Jose Angel Lombo, Jose Ignacio Murillo, 2015-11-05 In present times certain fields of science are becoming aware of the necessity to go beyond a restrictive specialization and establish an open dialogue with other disciplines Such is the case of the approach that neuroscience and philosophy are performing in the last decade However this increasing interest in a multidisciplinary perspective should not be understood in our opinion as a new phenomenon but rather as a return to a classical standpoint a proper understanding of human features organic cognitive volitional motor or behavioral for example requires a context that includes the global dimension of the human being We believe that grand neuroscientific conclusions about the mind should take into account what philosophical reflection has said about it likewise philosophers should consider the organic constitution of the brain to draw inferences about the mind Thus both neuroscience and philosophy would benefit from each other's achievements through a fruitful dialogue One of the main problems a multidisciplinary group encounters is terminology the same term has a different scope in various fields sometimes even contradictory Such is the case of habits from a neuroscientific perspective a habit is a mere automation of an action It is therefore linked to rigidity and limitation However from a classical philosophical account a habit is an enabling capacity acquired through practice which facilitates improves and reinforces the performance of certain kind of actions From neuroscience habit acquisition restricts a subject's action to the learnt habit from philosophy habit acquisition allows the subject to set a distance from the simple motor performance to cognitively enrich the action For example playing piano is a technical habit considering the neuroscientific account a pianist would just play those sequences of keystrokes that had been repeatedly practiced in the past However according to the philosophical perspective it would allow the pianist to improvise and moreover go beyond the movements of their hands to concentrate in other features of musical interpretation In other words a holistic view of habits focuses on the subject's disposition when facing both known and novel situations We believe neuroscience could contribute to achieve a deeper understanding of the neural bases of habits whose complexity could be deciphered by a philosophical reflection Thus we propose this Research Topic to increase our understanding on habits from a wide point of view This collection of new experimental research empirical and theoretical reviews general commentaries and

opinion articles covers the following subjects habit learning implicit memory computational and complex dynamical accounts of habit formation practical cognitive perceptual and motor habits early learning intentionality consciousness in habits performance neurological and psychiatric disorders related to habits such as obsessive compulsive disorder stereotypies or addiction habits as enabling or limiting capacities for the agent *Phenomenology of Broken Habits* Line Ryberg Ingerslev,Karl Mertens,2024-07-12 This volume explores the phenomenology of broken habits and their affective social and involuntary dimensions It shows how disruptive experiences impact self understanding and social embeddedness The chapters in this volume investigate the epistemic and existential relevance of breakdown of habits and the corresponding kinds of self understanding available to the agent The first part focuses on the double sidedness of habitual life On the one hand habits allow us to arrange and navigate in a familiar home world on the other hand habits can take hold of us in such a way that we lose our sense of autonomy The contributors argue that habitual agency is structurally carried by a dynamic that entails both freedom and necessity As habits enable us to inhabit and thus acquire a world they also affectively provide a texture and a background for our feeling at home in the world The chapters in Part 2 focus on the breakdowns of our habitual social and technological life forms and the phenomenology of their affective texture History and habitual learning are sedimented in our body memory and in our language and these sedimented layers are partly out of our direct control Part 3 focuses on the structural openness of habits in relating to one s past and one s traumatic experiences Part 4 reflects on the ways in which we might become aware of and thus transform or appropriate our culturally given habits *Phenomenology of Broken Habits* will appeal to researchers and advanced students working in phenomenology philosophy of mind and philosophy of psychology *The Science Of Habits: Transform Your Life And Business With Small Changes* Moises Riddle,2025-04-17 In a world where change often feels daunting *The Science Of Habits Transform Your Life And Business With Small Changes* offers a refreshing perspective on how minor adjustments can lead to significant transformations This book unravels the complexities of habit formation making it accessible to anyone eager to improve their personal and professional life By delving into the science behind habits readers gain valuable insights into why we do what we do and how we can harness this knowledge to create lasting positive change The book begins by exploring the fundamental principles of habits illustrating how they shape our daily routines and long term outcomes Through engaging stories and scientific research readers discover the power of small incremental changes and the ripple effects they can have Each chapter builds on the last providing practical tips and strategies for identifying and modifying habits The narrative is both inspiring and informative offering a blend of theory and practical application that keeps readers engaged and motivated Throughout the book key concepts such as the habit loop keystone habits and the role of environment in habit formation are thoroughly examined **Personal Efficiency** James Samuel Knox,1919 *Investigation of Affairs at the Kiowa, Comanche, and Apache Indian Reservation* United States.
