The Cognitive

Foundations of Personality Traits Shulamith Kreidler,Hans Kreidler,2013-06-29 Hardly anything in psychology is as irking

as the trait concept Psychologists and laypersons alike use primarily adjective trait names to characterize and even conceptualize the individuals they encounter There are more than a hundred well defined personality traits and a great many questionnaires for their assessment some of which are designed to assess the same or very similar traits Little is known about their ontogenetic development and even less about their underlying dynamics Psychoanalytic theory was invoked for explaining the psychodynamics underlying a few personality traits without however presenting sufficient empirical evidence for the validity of these interpretations In a reductionistic vein behaviorally inclined psychologists have propounded the thesis that all traits are acquired behaviors Yet this view neither reduces the number of personality tests nor explains the resistance of traits to modification by means of reward and punishment Dissatisfied with these and some other less well known approaches to personality traits we decided to explore whether applying our psychosemantic theory of cognition to the trait concept would do better The way we had to follow was anything but easy

Behavior Genetics of Temperament and Personality Kimberly J. Saudino, Jody M. Ganiban, 2021-03-17 This volume examines behavioral genetic research on temperament and personality from a number of perspectives. It takes a developmental perspective on a number of issues across the lifespan, focusing on personality and temperament. The first section focuses on the development of temperament and personality. Typically, this has involved exploring genetic and environmental contributions to phenotypic stability and instability, but more recently, there has been research that examines the etiology of intra-individual change and growth trajectories. The second section examines genetic and environmental contributions to the association between temperament and personality and other behaviors. The third and fourth sections discuss genotype-environment correlations and interactions and introduce the reader to molecular genetics research on temperament and personality. Chapter 11 will discuss the significance of this type of research, and Chapter 12 will provide an example of a specific line of research exploring genes associated with temperament.

Neurobiology in the Treatment of Eating Disorders Hans Wijbrand Hoek, Janet Treasure, Melanie Katzman, 1998-08-17 It is often difficult to blend the knowledge from scientific research with the experience of clinical practice. This book does exactly that. By incorporating recent advances in biological sciences with the concept of aetiology and treatment of eating disorders, the editors have successfully produced an authoritative state-of-the-art text. The internationally renowned authors suggest ways of integrating the latest findings within a treatment setting. Topics covered include Phenomenology, Measurement of Psychopathology, Stress, Neurobiology, and Eating Behaviour, and Weight Control, Emotional States, and Bulimic Psychopathology, Neuroimaging, Treatment of Anorexia Nervosa, Treatment of Binge Eating Disorder, Pharmacotherapy, Nutritional Management, Medical Complications. Evaluation of the Psychiatric Patient

Seymour L. Halleck, 2013-11-09 A few months before the final manuscript of this book was sent to the publisher Dr Karl A Menninger died shortly before his ninety seventh birthday Thus when I sat down to write this preface he was very much on my mind I remembered that it had been almost forty years since he wrote A Manual for Psychiatric Case Study not one of his well known but probably the most practical of his books The psycho analytically trained part of me began to wonder what had motivated me to write a book on a topic so similar to that which had earlier drawn the attention of my revered teacher There is no pressing need for another book on psychiatric evaluation furthermore evaluation is a very difficult subject to write about in a straightforward way Whatever my unconscious motivations may have been I hope they were less significant than those of which I was aware I wrote this book mainly as part of an effort to reverse certain trends in psychiatric education In the last decade psychiatrists have increasingly been trained in an environment that emphasizes brief evaluation of patients and de emphasizes teaching about the complexity of human behavior and experience Trainees no longer study psychiatric evaluation in a systematic manner They take fewer intensive histories fill out forms instead of describing the patient's mental status and with rare exceptions are not taught how to conceptualize biological and psychosocial interactions
