Women Traders in Cross-Cultural Perspective Linda J.

Seligmann,2002-03-01 This innovative volume studies women as economic political and cultural mediators of space gender value and language in informal markets Drawing on diverse methodologies multisited fieldwork linguistic analysis and archival research the contributors demonstrate how women move between and knit together household and marketplace activities This knitting together pivots on how household practices and economies are translated and transferred to the market as well as how market practices and economic principles become integral to the nature and construction of the household Exploring the cultural identities and economic practices of women traders in ten diverse locales Bolivia Ghana Hungary India Indonesia Mexico Morocco Nicaragua Peru and the Philippines the authors pay special attention to the effects of global forces national economic policies and nongovernmental organizations on women s participation in the market and the domestic sector The authors also consider the impact that women s economic and political activities in social movements public protests and more hidden kinds of subversive behavior have on state policy on the attitudes of different sectors of society toward female traders and on the dynamics of the market itself A final theme focuses on the cultural dimension of mediation Many women traders straddle cultural spheres and move back and forth between them Does this affect their participation in the market and their identities How do ties of ethnicity or acts of reciprocity affect the nature of commodity exchanges Do they create exchanges that are neither purely commodified nor wholly without calculation Or is it more often the case that ethnic commonalities and reciprocity merely mask the commodification of social and economic exchanges Does this straddling lead to the emergence of new kinds of hybrid identities and practices In considering these questions the authors specify the ways in which consumers contribute to identity formation among market women

Cyborgs@Cyberspace? David Hakken,2002-06-01 Arguing that humans have always been technological as well as cultural beings David Hakken calls for a fundamental rethinking of the traditional separation of anthropology and technical studies Drawing on three decades of research on contemporary technological societies this book outlines a fresh way of thinking about technology and offers an ethical and political response to the challenge of truly living as cyborgs in the age of cyberspace Women, Poverty and Ideology in Asia Haleh Afshar,B. Agarwal,2016-07-27 This book examines the contradictions between the prevailing ideologies and cultural practices and the economic interests of women in poor households in Asia Here the primacy of economic needs necessitates that all members of the household women men and children engage in income generating employment yet at the same time prevailing ideologies often impose restrictions on women s work Thus caught in the poverty trap they face conflicting choices between survival needs and social acceptability This collection of essays demonstrate the differing or complementary roles played by different agents such as the State private employers religious groups the community and the family and their effects on the lives of impoverished women in India Pakistan Iran Sri Lanka Korea Malaysia Hong Kong and Singapore The degree of complementarity or contradiction varies according to country class caste and ethnicity What is of interest however is the way they are manifested and in whose

interest they are resolved Indians and Leftists in the Making of Ecuador's Modern Indigenous Movements Marc Becker, 2008-08-18 Gives historical background to late 20th century activism of Ecuador's Native peoples highlighting women's role and the importance of cross fertilization between class based movements and ones based on race ethnicity and identity

A Marxist Archaeology Randall H. McGuire, 2002-12-31 A rich intellectual tradition that offers archaeologists a way around many seemingly irresolvable theoretical oppositions Marxism deserves a place in the philosophical and substantive debates in archaeology This book applies Marxist theory to archaeology explores long term historical change and cultural evolution and advocates a dialectical and historical approach to the study of the past Originally published by Academic Press in 1992 this edition features a new prologue by the author **The Ascent of Chiefs** Timothy R. Pauketat, 1994-09-30

Provides a theoretical explanation of how prehistoric Cahokia became a stratified society Considering Cahokia in terms of class struggle Pauketat claims that the political consolidation in this region of the Mississippi Valley happened quite suddenly around A D 1000 after which the lords of Cahokia innovated strategies to preserve their power and ultimately emerged as divine chiefs The new ideas and new data in this volume will invigorate the debate surrounding one of the most important developments in North American prehistory *Marxism and History* S. H. Rigby, 1998 This critically acclaimed book now in its second edition is firmly established as an essential guide to this recent historiographical debate Adopted as a set book by the Open University An indispensable guide to Marxist historiography for undergraduates

The Waves of Time K. R. Dark, 2016-10-06 Since the end of the Cold War analysts of international politics have given much greater attention to issues of change It has become increasingly clear to specialists from many fields that any understanding of large scale political change must encompass far longer timescales than has been usual in the study of world politics and must incorporate multi disciplinary perspectives This book evaluates and draws on relevant theoretical approaches from other disciplines such as sociology economics geography history anthropology and archaeology as well as evolutionary theory and the mathematical study of complexity Using an epistemological framework Dark sets out a theory of long term world political change the theory of Macrodynamics This is then applied to historical anthropological and archaeological data to explain the changing forms of political organization from the earliest human societies to the late twentieth century The resulting analysis is a reinterpretation of the processes of global political change in the past and present This in turn opens new areas of enquiry in the study of international relations and has profound implications for how we understand the changing world of today

Archaeology Dane Castaneda, 2018-02-28 Archaeology is the scientific study of past cultures through analysis of physical remains Essentially physical remains are bones of early people as well as their manufactured tools goods artifacts and the foundations of settlements Archaeologists search for and analyze these remains in order to understand something about the culture of the people that left them Archaeologists often work closely with historians and anthropologists Antiquarianism is the earliest stage of archaeology Named for the process of collecting and displaying historical treasures antiquarianism was

generally the domain of wealthy individuals who had the resources to spend time searching for acquiring and displaying artifacts. These individuals were motivated by a variety of reasons from nationalism for instance the history of the land of their birth to religious reasons the examination of Biblical manuscripts. Note that the beginnings of antiquarianism are ancient and may go back to or further than the Greek historian Herodotus in the fifth century BCE. Today archaeology is a precise science. Archaeologists' tools include radioactive carbon dating and geophysical prospecting. The discipline is strongly influenced and even driven by humanities like history and art history. However it is at heart intensely methodical and technical. But archaeology hasn't always been precise. In fact it hasn't always been a science. Archaeology originated in 15th and 16th century Europe with the popularity of collecting and Humanism a type of rational philosophy that held art in high esteem. The inquisitive elite of the Renaissance collected antiquities from ancient Greece and Rome considering them pieces of art more than historical artifacts. The book focuses on the present state of our understanding of archaeology of the early historic period. It explores archaeological methods aims objectives and practices. It addresses key issues that are traditionally associated with early historic archaeology. The Oxford Companion to the History of Modern Science John L.
