Palmquist,EA Quinn,2017-12-22 Breastfeeding New Anthropological Approaches unites sociocultural biological and archaeological anthropological scholarship to spark new conversations and research about breastfeeding While breastfeeding has become the subject of intense debate in many settings anthropological perspectives have played a limited role in these conversations The present volume seeks to broaden discussions around breastfeeding by showcasing fresh insights gleaned from an array of theoretical and methodological approaches which are grounded in the close study of people across the globe Drawing on case studies and analyses of key issues in the field the book highlights the power of anthropological research to illuminate the evolutionary historical biological and sociocultural context of the complex lived experience of breastfeeding By bringing together researchers across three anthropological subfields the volume seeks to produce transformative knowledge about human lactation breastfeeding and human milk This book is a key resource for scholars of medical and biological anthropology evolutionary biology bioarchaeology sociocultural anthropology and human development Lactation professionals and peer supporters midwives and others who support infant feeding will find the book an essential read Moral Issues in Global Perspective - Volume 3: Moral Issues - Second Edition Christine Koggel,2006-03-23 Now available in three thematic volumes the second edition of Moral Issues in Global Perspective is a collection of the newest and best articles on current moral issues by moral and political theorists from around the globe Each volume seeks to challenge the standard approaches to morality and moral issues shaped by Western liberal theory and to extend the inquiry beyond the context of North America Covering a broad range of issues and arguments this collection includes critiques of traditional liberal accounts of rights justice and moral values while raising questions about the treatment of disadvantaged groups within and across societies affected by globalization Providing new perspectives on issues such as war and terrorism reproduction euthanasia censorship and the environment each volume of Moral Issues in Global Perspective incorporates work by race class feminist and disability theorists In Moral Issues the third of the three volumes issues such as euthanasia and health care reproductive issues pornography and hate speech animal rights and environmental ethics are examined in the context of globalization and of differing social contexts and practices Sixteen essays are new one of which was written especially for this volume Moral Issues in Global Perspective is available in three separate volumes Moral and Political Theory Human Diversity and Equality and Moral Issues **Genes, Language, & Culture History in the Southwest Pacific** Jonathan S. Friedlaender,2007-04-19 The broad arc of islands north of Australia that extends from Indonesia east towards the central Pacific is home to a set of human populations whose concentration of

diversity is unequalled elsewhere Approximately 20% of the world's languages are spoken here and the biological and genetic heterogeneity among the groups is extraordinary Anthropologist W W Howells once declared diversity in the region so Protean as to defy analysis However this book can now claim considerable success in describing and understanding the origins of the genetic and linguistic variation there In order to cut through this biological knot the authors have applied a comprehensive battery of genetic analyses to an intensively sampled set of populations and have subjected these and complementary linguistic data to a variety of phylogenetic analyses This has revealed a number of heretofore unknown ancient Pleistocene genetic variants that are only found in these island populations and has also identified the genetic footprints of more recent migrants from Southeast Asia who were the ancestors of the Polynesians The book lays out the very complex structure of the variation within and among the islands in this relatively small region and a number of explanatory models are tested to see which best account for the observed pattern of genetic variation here The results suggest that a number of commonly used models of evolutionary divergence are overly simple in their assumptions and that often human diversity has accumulated in very complex ways
