Perspectives In Nuclear Physics - Proceedings Of The International Conf

Joseph H Hamilton, H K Carter, R B Piercey, 1999-08-30 This book provides an overview of the current research and future prospects in a variety of important areas in nuclear physics by leaders in their respective areas. Advances in both theory and experiments are covered. The topics included new insights into the fission process and the use of fission in the characterization of nuclear fuel waste. High spin spectroscopy studies of both proton and neutron rich nuclei are described. New and emerging areas covered include relativistic heavy ion physics at RHIC as it turns on in 1999 to new opportunities with radioactive ion beams at several laboratories to prospects for new neutrino studies with the high intensity 1 GeV proton beam from the Spallation Neutron source when it is completed in 2005. A major part of this book includes current and future research with stable and radioactive ion beams at the Holifield RIB facility and the performance and first results with the new generation recoil mass spectrometer at Holifield. *Perspectives in Nuclear Physics* Joseph H. Nucleons to the Atomic Nucleus Kris Heyde, 2013-03-09 The present text grew out of a number of lecture courses for advanced undergraduate and new graduate students in nuclear physics. They were given at summer schools in Leuven, Melbourne and at study weeks for Dutch graduate students which aimed to emphasize fundamental and topical aspects of nuclear physics. On occasion part of the present text was presented to students from a much wider field than just nuclear physics and also within a number of general physics colloquia where in addition to nuclear physicists, physicists from many other fields were present. In this respect the intention is to present in an amply illustrated form the key questions that arise in nuclear physics. At the same time we try to show why a better understanding of the atomic nucleus is not only important in itself but also yields essential insights into the many connections to other fields of physics. We thus concentrate on the unifying themes rather than addressing in great detail particular subfields of nuclear physics. The present project does not aim to be another comprehensive textbook on nuclear physics. Many of the detailed technical arguments that enter into the picture are not developed here as they would be in a more standard textbook. Instead they are presented using analogies quite often with simple pictures and arguments that try to convey the general line of thinking and working in nuclear physics.

Perspectives In Nuclear Physics At Intermediate Energies - Proceedings Of The Conference Sigfrido Boffi, Claudio Ciofi Degli Atti, Mauro Giannini, 1996-03-20 This book focuses on the latest theoretical and experimental results and future perspectives regarding electromagnetic and hadronic physics at intermediate energies. Nucleon form factors and spin structure functions, deep inelastic scattering, excited baryons and mesons and correlations in nuclei are discussed. Many new results and the scientific programmes of the different laboratories in Europe and North America are also presented. A special section is devoted to relativistic approaches to hadrons and nuclei at intermediate energies. Workshop on Perspectives in
