**Raman Spectroscopy, Fullerenes and Nanotechnology** Maher S. Amer, 2010. This unique book is the first treatment of nanotechnology as the science controlled by the behaviour of thermodynamic small systems. It provides comprehensive discussions on fullerenes as building blocks, Raman spectroscopy as a powerful diagnostic tool and nanotechnology as the technology bridging the gap between human made and biological materials systems. Aimed at graduate students, scientists, researchers and educators interested in academia, government and industry, the text is divided into four chapters. The first covers the potential of nanotechnology to develop a better, deeper understanding of the physical and chemical phenomena observed in natural systems. It also contains a section introducing nanotechnology to the public in simple, non-scientific terms. The second chapter is devoted to Raman spectroscopy and could in itself serve as a basis for a short course on its applications in materials science. The third section covers fullerenes and presents their history and development as well as discussing the structure and production of zero-dimensional, one-dimensional and two-dimensional fullerenes. The fourth and final chapter serves as a correlation discussion and overview. It emphasizes the unique nano-phenomena exhibited by the fullerene systems as carbon-based nanostructured systems. This chapter and therefore the book concludes with a discussion on the potential of nano-science and technology to shape the future of human society.

**Nanomaterials: Evolution and Advancement towards Therapeutic Drug Delivery (Part II)** Surendra Nimesh, Nidhi Gupta, Ramesh Chandra, 2021-06-02. The development of a vector for the delivery of therapeutic drugs in a controlled and targeted fashion is still a major challenge in the treatment of many diseases. The conventional application of drugs may lead to many limitations including poor distribution, limited effectiveness, lack of selectivity and dose-dependent toxicity. An efficient drug delivery system can address these problems. Recent nanotechnology advancements in the biomedical field have the potential to meet these challenges in developing drug delivery systems. Nanomaterials are changing the biomedical platform in terms of disease diagnosis, treatment and prevention. Nanomaterials-aided drug delivery provides an advantage by enhancing aqueous solubility that leads to improved bioavailability, increased residence time in the body, decreased side effects by targeting drugs to the specific location, reduced dose-dependent toxicity and protection of drugs from early release. In this two-part book, the contributors have compiled reports of recent studies illustrating the promising nanomaterials that

can work as drug carriers which can navigate conventional physiological barriers A detailed account of several types of nanomaterials including polymeric nanoparticles liposomes dendrimers micelles carbon nanomaterials magnetic nanoparticles solid lipid based nanoparticles silica nanomaterials and hydrogels for drug delivery is provided in separate chapters The contributors also present a discussion on clinical aspects of ongoing research with insights towards future prospects of specific nanotechnologies Part II covers the following topics Solid lipid nanoparticles and nanostructured lipid carriers Silica based nanomaterials Hydrogels Metallic nanoparticles Computational and experimental binding interactions of drug and cyclodextrin Clinical milestones in nanotherapeutics Drug delivery systems based on poly lactide co glycolide and its copolymers The book set is an informative resource for scholars who seek updates in nanomedicine with reference to nanomaterials used in drug delivery systems
