Perspectives On Ecological Integrity:

Perspectives on Ecological Integrity L. Westra, J. Lemons, 2012-12-06 Concepts of ecological integrity have recently been proposed to facilitate enhanced protection of biological and ecological resources against the threat of human activities. The promotion of ecological integrity as a basis for public policy and decision making stems from scientists and others concerned about the threats of human activities to ecosystems and species and from philosophers attempting to derive a more suitable ethic to guide the relationships between humans and the non human environment. Although ecological integrity has been proposed as a norm for public policy and decision making the concept is relatively new and therefore the underlying scientific and philosophical rationales have not been fully developed. This book offers a number of perspectives to stimulate and inform future discussion on the importance and consequences of ecological integrity for science, morality and public policy. Audience: Environmental professionals whether academic, governmental or industrial or working in the private consultancy sector. Also suitable as an upper level reference text.

Ecological Sustainability and Integrity: Concepts and Approaches J. Lemons, L. Westra, Robert Goodland, 1997-12-31 This book follows upon earlier work which culminated in the publication of two recent books: Sustainable Development Science, Ethics and Public Policy (John Lemons and Donald A. Brown, editors) and Perspectives on Ecological Integrity (Laura Westra and John Lemons, editors). Both of these books also were published by Kluwer Academic Publishers. In this book we seek to explore more fully the concepts of sustainability and ecological integrity as well as the connections between them. We have divided chapters into three groups. In the first the concept of sustainability in relation to science, law and ethics is explored. In the second, concepts of sustainability and ecological integrity are applied to problems in specific natural resources. Finally, in the third group we examine possible approaches to public policy which might include concepts of sustainability and ecological integrity. Overall, we believe that this collection presents a wide variety of perspectives, discussions and case studies. John Lemons, Laura Westra, Robert Goodland, Editors. ix. CONTENTS. PART I Sustainability in Relation to Science, Law and Ethics. Chapter 1 The Concept of Sustainability: A Critical Approach. Lynton K. Caldwell. 1. Problems of Definition. 2. Behavioral Obstacles. 4. 3 Psychological Obstacles. Seven Deadly Sins of Unsustainability. 8. 4.

Living in Integrity Laura Westra, 1998 This innovative book takes a new look at environmental ethics and the need for ecological and biological integrity. Laura Westra explores the necessity for radical alteration not only of interpersonal ethics but also of social institutions and public policy. In the process Westra denies the validity of majority rule in environmentally ethical concerns. Issues discussed in the book include the link between ecological integrity and human health, an environmental evaluation of business and technology, biotechnology and transgenics in agriculture and aquaculture and the environmental ethics of the ancient Greeks and Kant. Living in Integrity is a valuable book for philosophers and environmentalists alike.

Handbook of Ecosystem Theories and Management Felix Muller, 2000-02-10 As part of the Environmental and Ecological Modeling Handbooks series, the Handbook of Ecosystem

Theories and Management provides a comprehensive overview of ecosystem theory and the tools ecological engineering ecological modeling ecotoxicology and ecological economics to manage these systems The book is laid out to provide a summary or survey of each topic using many tables and figures Concepts definitions important findings basic hypotheses important correlations between theories and observation with illustrative graphs are included The comprehensive treatment of ecosystem theory and application of theoretical tools and the integration of classical theory and real world examples sets this book apart It covers newly emerging topical areas as well as nontraditional topical areas i e chaos that will interest professionals trained in previous decades and enlighten those now entering into formal training The general approach taken by the authors makes this an essential reference and handbook for professionals and students The Oxford Companion to Global Change Andrew Goudie,David Cuff,2008-11-21 The Oxford Companion to Global Change is an up to date comprehensive interdisciplinary guide to the range of issues surrounding natural and human induced changes in the Earth s environment In one convenient volume the Companion brings together current knowledge about the relations between technological social demographic economic and political factors as well as biological chemical and physical systems It is an essential reference work for students teachers researchers and other professionals seeking to understand any aspect of global change **Managing for Healthy Ecosystems** David J. Rapport,Bill L. Lasley,Dennis E. Rolston,N. Ole Nielsen,Calvin O. Qualset,Ardeshir B. Damania,2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population Based on a symposium on ecosystem health Managing for Healthy Ecosystems identifies key issues that must be resolved if there is to be progress in this complex area such as Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change agroecosystems restoration of forests politics culture and tradition Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide The more than 100 peer reviewed papers are grouped into three major parts The first Emerging Concepts explores the diverse meanings of ecosystem health within ecological socio economic and human health perspectives and the linkages to related concepts such as ecological integrity sustainable development and ecological footprints The second part Issues and Methods introduces methods for assessing and monitoring ecosystem health including strategies for gaining political and stakeholder input and support for science based ecosystem management The final part Case Studies reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems **The Greeks and the Environment** Laura Westra,T M. Robinson,1997-04-30 Environmental ethicists have frequently criticized ancient Greek philosophy as anti environmental for a view of philosophy that is counterproductive to environmental ethics and a view of the world that puts nature at the disposal

of people This provocative collection of original essays reexamines the views of nature and ecology found in the thought of Plato Aristotle the Stoics and Plotinus Recognizing that these thinkers were not confronted with the environmental degradation that threatens contemporary philosophers the contributors to this book find that the Greeks nevertheless provide an excellent foundation for a sound theory of environmentalism **An Environmental Proposal for Ethics** Laura

Westra,1994-01-10 This original discussion breaks new ground by thoroughly analyzing ethical and aesthetic values centering on the concept of ecological integrity that apply intrinsically to nature and that govern our rightful use of the environment Those who have been waiting for an exciting account of the inherent structure and worth of ecological systems in relation to environmental policy will find it in this book Mark Sagoff Director of the Institute for Philosophy and Public Policy University of Maryland at College Park **Encyclopedia of Global Change** Andrew S. E. Ulanowicz,1997 A challenge to existing Newtonian and Darwinian paradigms Ecology the Ascendent Perspective demonstrates that a theoretically reshaped science of ecology better suited to portraying the dynamics of the natural world can be a more effective means of ensuring its health **Ecoviolence and the Law: Supranational Normative**

Foundation of Ecocrime Laura Westra,2021-11-22 Exploring such acts of environmental violence as ecocrimes the author builds the case that the international law principles of jus cogens and erga omnes justify characterizing ecocrime as a just crime requiring action to curb their occurrence and punishment to deter them The book discusses the obstacles that defining environmental assaults as ecocrimes will face both in national and international circumstances The author concludes by proposing the creation of an International Environmental Court that would adjudicate ecocrime issues This forward thinking work will be of great interest to all involved in the human rights issues of environmental threats Published under the Transnational Publishers imprint **Nature in Common?** Ben Minteer,2009-04-15 A groundbreaking contribution to a

central debate in environmentalism Environmental Management in Practice: Vol 1 Paul Compton, Dimitri Devuyt, Luc Hens, Bhaskar Nath, 2013-01-11 Focuses on the instruments and tools currently available to the environmental manager A theoretical background to the instruments is given together with an overview of those instruments that are in common use today with particular attention to the physical economic legislative and communication instruments **The Intersection of Economics and Ecology** Gurudas Nulkar, 2024-11-25 p This book is a machine generated literature overview highlighting the importance of natural capital while studying the economics of ecology It puts together available literature on this theme exploring it through the lens of sustainable development While the main content is machine generated each chapter contains curated published content overview and an introduction by the editor highlighting important areas and literature gaps describing the connection of the topic with human economy and examples of negative externalities The topics seek out research articles that show a connection with mainstream economy or rural livelihoods The connection between natural capital and human economy is well known but many of these negative externalities are complex problems to solve While there is a growing awareness to capture the value of natural capital in economic decision making there is no universal consensus However assessing the economic value of natural resources and ecosystem services and integrating this information into decision making processes such as cost benefit analysis corporate reporting and government policy making holds a promise of finding long term solutions to these market failures By valuing natural capital decision makers can better understand the economic benefits and costs of different activities and policies and make more informed choices that balance economic social and environmental objectives Containing important introductions by the human editor to plug gaps in literature the book is a great resource for policy makers students of economics and sustainable development non governmental organisations working in this field and corporate managers who are responsible for allotting budgets towards corporate social responsibility programs Concepts and Values in Biodiversity Dirk Lanzerath, Minou Friele, 2014-01-23 Biodiversity may refer to the diversity of genes species or ecosystems in general These varying concepts of biodiversity occasionally lead to conflicts among researchers and policy makers as each of them require a customized type of protection strategy This book addresses the questions surrounding the merits of conserving an existing situation evolutionary development or the intentional substitution of one genome species or ecosystem for another Any practical steps towards the protection of biodiversity demand a definition of that which is to be protected and in turn the motivations for protecting biodiversity Is biodiversity a necessary model which is also useful or does it carry intrinsic value Debates like this are particularly complex when interested parties address it from different conceptual and moral perspectives Comprised of three parts each complemented by a short introductory paragraph this collection presents a variety of approaches to this challenge The chapters cover the perspectives of environmental scientists with expertise in evolutionary environmental biology systematic zoology and botany as well as those of researchers with expertise in philosophy ethics politics law and economics

This combination facilitates a truly interdisciplinary debate by highlighting hitherto unacknowledged implications that inform current academic and political debates on biodiversity and its protection. The book should be of interest to students and researchers of environment studies, biodiversity, environmental philosophy, ethics, and management. Perspectives on an Evolving Creation Keith B. Miller, 2003-09-25. According to the authors of this book, who explore evolutionary theory from a clear Christian perspective, the common view of conflict between evolutionary theory and Christian faith is mistaken. Written by contributors representing the natural sciences, philosophy, theology, and the history of science, this thought-provoking work is informed by both solid scientific knowledge and keen theological insight. The three sections of the book address 1) relevant biblical, historical, and scientific background; 2) the scientific evidence for an evolving creation; and 3) theological issues commonly raised in connection with evolution, including the nature of God's creative activity, the meaning of the miraculous, and the uniqueness of humankind. Woven through the volume are short meditations designed to direct readers toward worshipping the God of providence. Contributors: Laurie J. Braaten, Warren S. Brown Jr., David Campbell, Robin Collins, Edward B. Davis, Terry M. Gray, Jeffrey K. Greenberg, Deborah B. Haarsma, Loren Haarsma, James P. Hurd, Conrad Hyers, David N. Livingstone, Keith B. Miller, John C. Munday Jr., George L. Murphy, Mark A. Noll, Robert John Russell, Howard J. Van Till, David L. Wilcox, Jennifer Wiseman. The Biofuel Delusion Mario Giampietro, Kozo Mayumi, 2009. Faced with the twin threats of peak oil and climate change, many governments have turned for an answer to the apparent panacea of biofuels. Yet increasingly, the progressive implementation of this solution demonstrates that the promise of biofuels as a replacement to fossil fuels is in fact a mirage that, if followed, risks leaving us short of power, short of food, and doing as much damage to the climate as ever. Let alone the consequent impact on biodiversity due to additional loss of habitat for agricultural production and on rural development due to the additional stress on traditional farming systems. Worse still, these risks are being ignored. In this definitive exposé, Mario Giampietro and Kozo Mayumi present a theoretical framework and exhaustive evidence for the case against large-scale biofuel production from agricultural crops. This book will be vital, sobering reading for anyone concerned with energy or agricultural policy or bioenergy as a complex system. The Animal Ethics Reader Susan Jean Armstrong, Richard George Botzler, 2003. The Animal Ethics Reader is the first comprehensive state-of-the-art anthology of readings on this substantial area of study and interest. A subject that regularly captures the headlines, the book is designed to appeal to anyone interested in tracing the history of the subject as well as providing a powerful insight into the debate as it has developed. The recent wealth of material published in this area has not until now been collected in one volume. Readings are arranged thematically, carefully presenting a balanced representation of the subject as it stands. It will be essential reading for students taking a course in the subject as well as being of considerable interest to the general reader. Articles are arranged under the following headings: Theories of Animal Ethics, Animal Capacities, Animals for Food, Animal Experimentation, Genetic Engineering of Animals, Ethics and Wildlife, Zoos, Aquaria, and Animals in Entertainment, Companion

Animals Legal Rights for Animals Readings from leading experts in the field including Peter Singer Mary Midgely and Bernard Rollin are featured as well as selections from Donald Griffin Mark Bekoff Jane Goodall Raymond Frey Barbara Orlans Tom Regan and Baird Callicott There is an emphasis on balancing classic and contemporary readings with a view to presenting debates as they stand at this point in time Each chapter is introduced by the editors and study questions feature at the end The foreword has been written by Bernard Rollin This will be appropriate reading for students taking courses in philosophy ethics zoology animal science psychology veterinary medicine law environmental science and religion The Business of Consumption Laura Westra, Patricia H. Werhane, 1998-06-18 At the forefront of international concerns about global legislation and regulation a host of noted environmentalists and business ethicists examine ethical issues in consumption from the points of view of environmental sustainability economic development and free enterprise Visit our website for sample chapters **Insect Conservation** Michael J. Samways, Melodie A. McGeoch, Tim R. New, 2010 This handbook outlines the main methods and techniques both modern and traditional used to measure insect diversity With the growing relevance of insect conservation in nature this guide should assist students in understanding a complicated field
