Perspectives On Environmental Conflict And International Politics:

Perspectives on Environmental Conflict and International Relations Jyrki Käkönen, 1992 Environmental Change and Security Project Report, 1998 **Comparative Perspectives on Environmental Policies and Issues** Robert A. Dibley, 2014-01-10

Comparative Perspectives on Environmental Policies and Issues presents tools and concepts about environmental policies in several developed and developing countries. It explores a broad survey of ecological modernization theory, ecological feminism theory, environmental justice theory, the concept of sustainability, and research on environmental policies. Data were collected through surveys, interviews, and focus groups and are used to analyze social, economic, and environmental impact on people. The book specifically discusses how the earth's basic life-supporting capital (soils, forests, species, fresh water, and oceans) is degraded or depleted to provide for human needs, and how air pollution and acid precipitation are causing widespread injury to humans, forests, and crops. Realistically, over-taxing of natural resources and ecological systems throughout the world has promoted economic growth and created increasing opportunities for people while also advancing social injustice. The use of the environment to accomplish social and economic transformation raises fundamental issues for the study of environmental policy and the natural ecological system. As human beings exploit the natural environment to meet present needs, they often will destroy resources needed for the future generations. Thus, environmental policies are enacted to ensure that social and economic impacts of the environment are compatible with the limits of natural systems. Offering an intuitive and crystal clear explanation of the key concepts and principles of environmental policies and sustainable development, this volume is suitable not only for environmental science students but also for instructors, practitioners, researchers, and academics.

Simon Dalby: A Pioneer in International Relations Simon Dalby, Roger Boyd, 2025-06-11

This book profiles Simon Dalby's academic contributions in the fields of critical geopolitics, environmental security, and the intersection of international relations and the Anthropocene. It includes reprints of key essays that highlight innovations in critical thought at the intersections between geopolitics, environment, and security. Starting with an analysis of American reconstructions of the Soviet threat in the 1970s, an early contribution to the emerging field of critical geopolitics, subsequent papers focus on the emergent formulations of environmental security in the aftermath of the Cold War and the environmental costs of globalization. Focusing on the implicit geographical framing in discourses of globalization, offered a critique that extended the ambit of critical geopolitics to grapple with the issues of environmental security and the rising concern with climate change, as well as the political identities invoked in that debate. In the aftermath of 9/11, similar arguments about contextualization applied to the American global war on terror and the revival of discussions of empire and its geographies, both in arguments for invading Iraq as well as the wider discussions in policy discourse and popular culture. Simultaneously, the emergence of earth system science and the concept of the Anthropocene offered another way to highlight the dangers of fossil-fueled economic activities. The necessity of fundamentally rethinking the premises of

security policy in light of this recontextualization is emphasized in more recent contributions on climate security and the current ecological crisis Critical geopolitics Environmental security Global war on terror Firepower in the Anthropocene

Environmental Politics and Liberation in Contemporary Africa M.A. Salih, 2013-03-14 Nowadays the environment looms large in the analysis of conflict in developing societies and the precise role it plays is the subject of an ongoing debate The debate has moved on from the earlier but still popular notions of power struggles class struggles and ethnic conflicts to a perception of conflict as the product of intense group competition for resources Where the state controls the distribution of resources itself inevitably becomes party to conflicts whose bone of contention is access to state power as the most efficient means of gaining access to resources The resources in question are social health education transportation communication recreation etc and material land water housing jobs contracts licenses permits etc In parts of the world and especially in Africa diminishing resources and authoritarian state rule exacerbate group competition leading to political confrontation This is the line I have followed in analysing conflict in the Horn of Africa Markakis 1987 1998 Mohamed Salih's first contribution in this volume is to move the debate a step beyond this line which can be criticized as unduly materialist He does it by bringing culture into the realm of resources not only as a resource in itself but also as the agency that assigns natural resources their value Culture thus becomes a contextual element in conflict over resources whose value is culturally determined

Environment, Scarcity, and Violence Thomas F. Homer-Dixon, 2010-07-01 The Earth's human population is expected to pass eight billion by the year 2025 while rapid growth in the global economy will spur ever increasing demands for natural resources The world will consequently face growing scarcities of such vital renewable resources as cropland fresh water and forests Thomas Homer Dixon argues in this sobering book that these environmental scarcities will have profound social consequences contributing to insurrections ethnic clashes urban unrest and other forms of civil violence especially in the developing world Homer Dixon synthesizes work from a wide range of international research projects to develop a detailed model of the sources of environmental scarcity He refers to water shortages in China population growth in sub-Saharan Africa and land distribution in Mexico for example to show that scarcities stem from the degradation and depletion of renewable resources the increased demand for these resources and/or their unequal distribution He shows that these scarcities can lead to deepened poverty large scale migrations sharpened social cleavages and weakened institutions And he describes the kinds of violence that can result from these social effects arguing that conflicts in Chiapas Mexico and ongoing turmoil in many African and Asian countries for instance are already partly a consequence of scarcity Homer Dixon is careful to point out that the effects of environmental scarcity are indirect and act in combination with other social political and economic stresses He also acknowledges that human ingenuity can reduce the likelihood of conflict particularly in countries with efficient markets capable states and an educated populace But he argues that the violent consequences of scarcity should not be underestimated especially when about half the world's population depends directly on local renewables for

their day to day well being In the next decades he writes growing scarcities will affect billions of people with unprecedented severity and at an unparalleled scale and pace Clearly written and forcefully argued this book will become the standard work on the complex relationship between environmental scarcities and human violence

Environmental Governance for Sustainable Development Uma Nabhi, 2023-04-10 This book studies the role of the United Nations Environment Programme UNEP as an advocate for greater environmental responsibility and analyses the major achievements and outcomes of two landmark conferences Stockholm 1972 and Rio 1992 which set the agenda for the future role of the UNEP It discusses the UNEP s evolution objectives and the problems of differing perspectives within its ability to deal with environmental challenges its skill in successfully carrying out the mandate and contributing to the pursuit of environmental security The book also looks at five developing countries of South Asia namely India Bangladesh Nepal Pakistan and Sri Lanka to study the role of the South Asia Co operative Environment Programme SACEP which plays an active role in the management of environmental issues and constitutes an important landmark in regional cooperation in South Asia The author evaluates the contributions of National Conservation Strategies not only in creating environmental awareness but also in strengthening environmental governance architecture by integrating Millennium Development Goals and Sustainable Development Goals into the development planning of these South Asian countries under study Drawing on in depth research and interviews this book will be of interest to students teachers researchers policymakers and strategic analysts working in the fields of environment studies sustainable development environmental science and policy environmental law and governance geography politics and international affairs

Security and Environment in the Mediterranean Hans Günter Brauch, Peter H. Liotta, Antonio Marquina, Paul F. Rogers, Mohammad El-Sayed Selim, 2012-12-06 In this volume security specialists peace researchers environmental scholars demographers as well as climate desertification water food and urbanisation specialists from the Middle East and North Africa Europe and North America review security and conflict prevention in the Mediterranean They also analyse NATO s Mediterranean security dialogue and offer conceptualisations on security and perceptions of security challenges as seen in North and South The latter half of the book analyses environmental security and conflicts in the Mediterranean and environmental consequences of World War II the Gulf War the Balkan wars and the Middle East conflict It also examines factors of global environmental change population growth climate change desertification water scarcity food and urbanisation issues as well as natural disasters Furthermore it draws conceptual conclusions for a fourth phase of research on human and environmental security and peace as well as policy conclusions for cooperation and partnership in the Mediterranean in the 21st century

Peace in Uganda S. A. H. Abidi, 2011 Always Be Tolerant Organization ABETO was established and registered as a Non Governmental Organisation in June 1996 The inspiration was in pursuit of the Commonwealth conference resolution to embrace tolerance In the year 2002 ABETO conceived the idea of bringing out a series of publications stressing the value of Tolerance as a tool for resolving conflicts

and to educate Ugandans as well as the international community about the pressing problems and conflicts within the society This publication therefore is third in a series of ABETO publications after *Living Beyond Conflict for Peace and Tolerance* published in 2002 and *Diplomatic Approach to Peace Ambassadors and Commissions Speak out* published in 2005 Focussing again on the situation on Northern Uganda some of the topic covered in *Peace in Uganda The Role of Civil Society* are *The Importance of People's Participation in Conflict Resolution in Eastern Central and Western Uganda* *Promoting Sustainable Peace in Northern Uganda Through Agricultural Development* *The Role of Women in Advancement of Society* *The Importance of Cultural Institutions in Nation Building* **The Environment and International Relations** Mark Imber, John Vogler, 2005-08-12 Environmental issues and questions of global change are now firmly established on the international political agenda This book provides a wide ranging survey of the current treatment of environmental issues in international relations This book begins by looking at the relevance of the different theoretical approaches current in international relations to the study of the environment It analyzes a wide range of approaches from the debate between neo realism and liberal institutionalism to the significant connections between gender and global environmental change The book goes on to consider a range of key international processes discussing the monitoring and implementation of environmental agreements the place of ideology in negotiations and the role of international organisations *The Environment, International Relations, and U.S. Foreign Policy* Paul G. Harris, 2002-02-14 As the world's largest polluter and its wealthiest country the United States has a potentially enormous impact on international efforts to protect the environment In this innovative and thought provoking book an international group of scholars examines how U S foreign policy affects and is affected by global environmental change Covering three broad areas national security and geopolitics domestic and international politics and national interests and international obligations the contributors examine a host of key issues including ozone depletion and climate change biodiversity and whale hunting environmental and energy security and international trade They also raise moral issues associated with the United States's obligations to the rest of humanity Because the environment has become an ever more pressing issue at the diplomatic level this book is essential timely reading for policymakers activists and anyone interested in environmental change and international relations **Conventions, Treaties And Other Responses To Global Issues - Volume I** Gabriela Maria Kutting, 2009-08-25 *Conventions Treaties and other Responses to Global Issues* is a component of *Encyclopedia of Institutional and Infrastructural Resources in the global Encyclopedia of Life Support Systems EOLSS* which is an integrated compendium of twenty one Encyclopedias This theme *Conventions Treaties and other Responses to Global Issues* deals with the issue of international resource regimes These are formal responses by states to the threats posed by trans boundary pollution or the distribution of resources In the past thirty years the number of international environmental agreements has steadily risen to reach record numbers and these agreements have secured a firm place in the hierarchy of international affairs There is a loose assumption that this is a good

thing and that this rise has resulted in a commensurable improvement in environmental protection and resource allocation But is this actually the case In fact is there a positive correlation at all Or are there negative correlations What are the connections between environmental diplomacy and environmental protection and how can environmental protection be achieved These are just a few of the questions that will be addressed in this theme whilst at the same time giving an overview of the most important international resource regimes and the most influential international organizations having an environmental impact The theme takes the following shape the first section introduces issues of international environmental law and its history showing that international law can take many different forms Here we explain what policy tools states have in drafting responses to global environmental issues The second section deals with the most prominent international environmental agreements and gives a state of the art overview of existing regimes The third and last section of this theme introduces the key actors in the international arena besides states such as international organizations and civil society actors such as pressure groups These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

The Global Commons Susan J. Buck, 2012-06-22 Vast areas of valuable resources unfettered by legal rights have for centuries been the central target of human exploitation and appropriation The global commons Antarctica the high seas and deep seabed minerals the atmosphere and space have remained exceptions only because access has been difficult or impossible and the technology for successful extraction has been lacking Now technology has caught up with desire and management regimes are needed to guide human use of these important resource domains In *The Global Commons* Susan Buck considers the history of human interactions with each of the global commons areas and provides a concise yet thorough account of the evolution of management regimes for each area She explains historical underpinnings of international law examines the stakeholders involved and discusses current policy and problems associated with it Buck applies key analytical concepts drawn from institutional analysis and regime theory to examine how legal and political concerns have affected the evolution of management regimes for the global commons She presents in depth case studies of each of the four regimes outlining the historical evolution of the commons development of interest in exploiting the resource domain conflicts among nations over the use of the commons and efforts to design institutions to control access to the domains and to regulate their use and concluding with a description of the management regime that eventually emerged from the informal and formal negotiations *The Global Commons* provides a clear useful introduction to the subject that will be of interest to general readers as well as to students in international relations and international environmental law and in environmental law and policy generally

Responding to Environmental Conflicts: Implications for Theory and Practice Eileen Petzold-Bradley, Alexander Carius, Árpád Vincze, 2012-12-06 A comprehensive tour d horizon of the debate on the environment and security focusing on the various policy options for building peace and preventing environmental conflict Experts from the

areas survey the key environmental challenges in Eastern and Central European states and those of the former Soviet Union extending the debate to such regions as the Balkans the Black Sea and Central Europe This is the first time such extensive case study research has been reported for these regions Both practical and theoretical approaches to the debate are presented within a multi disciplinary framework the contributors ranging from academic experts involved with peace and conflict research to actual policy makers active in the fields of environmental and security policy Readership Experts already working in the relevant disciplines both academic and governmental as well as those seeking an introduction to the various policy fields A graduate level study text excellent survey for policy makers and an academic contribution to ongoing studies

Governmental Response to Environmental Challenges in Global Perspective Joseph G. Jabbara, O. P. Dwivedi, 1998 In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations

Global Challenges in the Arctic Region Elena Conde, Sara Iglesias Sánchez, 2016-08-05 Bringing together interconnected discussions to make explicit the complexity of the Arctic region this book offers a legal discussion of the ongoing territorial disputes and challenges in order to frame their impact into the viability of different governance strategies that are available at the national regional and international level One of the intrinsic features of the region is the difficulty in the determination of boundaries responsibilities and interests Against this background sovereignty issues are intertwined with environmental and geopolitical issues that ultimately affect global strategic balances and international trade and at the same time influence national approaches to basic rights and organizational schemes regarding the protection of indigenous peoples and inhabitants of the region This perspective lays the ground for further discussion revolving around the main clusters of governance focusing on the Arctic Council and the European Union with the particular roles and interest of Arctic and non Arctic states and the impact on indigenous populations environment including the relevance of national regulatory schemes and the intertwinement with concerns related to energy or migration strategy concentrating in geopolitical realities and challenges analysed from different perspectives and focusing on different actors and covering security and climate change related challenges This collection provides an avenue for parallel and converging research of complex realities from different

disciplines through the expertise of scholars from different latitudes The Global Environment and World Politics Elizabeth R. DeSombre, 2007-06-01 Environmental issues are increasingly important factors in world politics just think of the intense speculation over the climate change discussions at the forthcoming G8 summit The study of global environmental politics draws on a variety of academic traditions It uses international relations theory to look at the concerns and actions of states but has also had to find a variety of new concepts and perspectives in order to explain issues unique to the study of the environment Here DeSombre examines four important aspects of the field international environmental cooperation the relationship between the environment and security the issues of science uncertainty and risk and the role of non state actors In the second half of the book she examines these issues through the use of case studies on specific problems facing the global environment including global change the politics of whaling the protection of Amazonian biodiversity and acid rain in Europe and North America *Chinese Perspectives on Globalization and Autonomy* Tuo Cai, 2012-01-06 This book is a reflection of the discussion and debates on globalization and state autonomy in China These debates dated back to early 1990s witnessed China s gradual involvement in globalization Like other developing countries China faced tremendous pressure when globalization intensified in the 1990s As it turned out China arduously made up its mind to embrace globalization which reached its height when China was finally adopted as a member of the World Trade Organization in 2001 Thus the articles in this book record the anxiety concerns uncertainty and enthusiasm of Chinese scholars in the face of China s embracing of globalization In other words this book presents a unique Chinese perspective on globalization and state autonomy *Environmental Change and Foreign Policy* Paul G. Harris, 2009-06-03 Introduces the concepts and theories of environmental foreign policy and explores how countries have approached different issues to examine the role of foreign policy politics in protecting the environment **Global Environmental Politics** Jean-Frédéric Morin, Amandine Orsini, Sikina Jinnah, 2020 Global Environmental Politics provides a fully up to date and comprehensive introduction to the most important issues dominating this fast moving field Going beyond the issue of climate change the textbook also introduces students to the pressing issues of desertification trade in hazardous waste biodiversity protection whaling acid rain ozone depletion water consumption and over fishing Importantly the authors pay particular attention to the interactions between environmental politics and other governance issues such as gender trade development health agriculture and security
