A Human-Centered Perspective of Intelligent Personalized Environments and Systems Bruce Ferwerda, Mark Graus, Panagiotis Germanakos, Marko Tkalčič, 2024-04-30 This book investigates the potential of combining the more quantitative data-driven techniques with the more qualitative theory-driven approaches towards the design of user-centred intelligent systems. It seeks to explore the potential of incorporating factors grounded in psychological theory into adaptive intelligent routines, mechanisms, technologies and innovations. It highlights models, methods and tools that are emerging from their convergence along with challenges and lessons learned. Special emphasis is placed on promoting original insights and paradigms with respect to latest technologies, current research trends and innovation directions, e.g. incorporating variables derived from psychological theory and individual differences in adaptive intelligent systems so as to increase explainability, fairness and transparency and decrease bias during interactions while the control remains with the user.

Human-computer Interaction and Management Information Systems: Foundations Ping Zhang, Dennis F. Galletta, 2015-03-26 Human Computer Interaction and Management Information Systems Foundations offers state-of-the-art research by a distinguished set of authors who span the MIS and HCI fields. The original chapters provide authoritative commentaries and in-depth descriptions of research programs that will guide 21st-century scholars, graduate students and industry professionals. Human Computer Interaction or Human Factors in MIS is concerned with the ways humans interact with information technologies and tasks, especially in business, managerial, organizational and cultural contexts. It is distinctive in many ways when compared with HCI studies in other disciplines. The MIS perspective affords special importance to managerial and organizational contexts by focusing on analysis of tasks and outcomes at a level that considers organizational effectiveness. With the recent advancement of technologies and development of many sophisticated applications, human-centeredness in MIS has become more critical than ever before. This book focuses on the basics of HCI with emphasis on concepts, issues, theories and models that are related to understanding human tasks and the interactions among humans, tasks, information and technologies in organizational contexts in general.

Multimedia Interface Design in Education Alistair D.N. Edwards, Simon Holland, 2012-12-06 What the book is about This book is about the theory and practice of the use of multimedia multimodal interfaces for learning Yet it is not about technology as such at least in the sense that the authors do not subscribe to the idea that one should do something just because it is technologically possible Multimedia has been adopted in some commercial quarters to mean little more than a computer with some form of audio or more usually video attachment This is a trend which ought to be resisted as exemplified by the material in this book Rather than merely using a new technology because it is there there is a need to examine how people learn and communicate and to study diverse ways in which computers can harness text sounds speech images moving pictures gestures touch etc to promote effective human learning We need to identify which media in which combinations using what mappings of domain to representation are appropriate for which educational purposes The word multimodal in the title underlies this perspective The intention is to focus attention less on the technology and more on how to structure different kinds of information via different sensory channels in order to yield the best possible quality of communication and educational interaction Though the reader should refer to Chapter 1 for a discussion of the use of the word multimodal Historically there was little problem
