**Theory of Algebras and Structures and Applications** Michiel Hazewinkel, Murray Gerstenhaber, 2012-12-06 This volume is a result of a meeting which took place in June 1986 at Il Ciocco in Italy entitled Deformation theory of algebras and structures and applications It appears somewhat later than is perhaps desirable for a volume resulting from a summer school In return it contains a good many results which were not yet available at the time of the meeting In particular it is now abundantly clear that the Deformation theory of algebras is indeed central to the whole philosophy of deformations perturbations stability This is one of the main results of the 254 page paper below practically a book in itself by Gerstenhaber and Shack entitled Algebraic cohomology and deformation theory Two of the main philosophical methodological pillars on which deformation theory rests are the following Pure To study a highly complicated object it is fruitful to study the ways in which it can arise as a limit of a family of simpler objects the unraveling of complicated structures Applied If a mathematical model is to be applied to the real world there will usually be such things as coefficients which are imperfectly known Thus it is important to know how the behaviour of a model changes as it is perturbed deformed
