Prologue

If the credits of pesticides include enhanced economic potential in terms of increased production of food and fibre and amelioration of vector-borne diseases, then their debits have resulted in serious health implications to man and his environment. There is now overwhelming evidence that some of these chemicals do pose potential risk to humans and other life forms and unwanted side effects to the environment. The world-wide deaths and chronic illnesses due to pesticide poisoning number about 1 million per year.

A pesticide is any product that kills or controls various types of pests. Ideally a pesticide must be lethal to the targeted pests, but not to non-target species, including man. The rampant use of these chemicals, under the adage, 'if little is good, a lot more will be better' has played havoc with human and other life forms. Certain environmental chemicals including pesticides termed as endocrine disruptors are known to elicit their adverse effects by mimicking or antagonizing natural hormones in the body and it has been postulated that their long-term, low-dose exposure are increasingly linked to human health effects such as immunosuppression, hormone disruption, reproductive abnormalities and cancer.

Necessity and Value of Pesticides

Different groups of pesticides remained popular in different periods. In early days inorganic and plant extracts were popular, but in 40's 50's organochlorine (OC) became popular especially DDT was reported as 'Wonder Drug' during 2nd World War. For this great work of achievement Muller was awarded a noble prize. In 60's and 70's Organophosphates (OP) and Carbamates (CB) became popular and OP are still being used. However, in 80's synthetic pyrethroids (SP) dominated the scene and still the maximum import and use of pyrethroids is being done by government and private sectors because pyrethroids are comparatively safer and more effective as well. At present following pesticides are in major use: Cypermethrin, Deltamethrin, Lambda Cyhalothrin, Imidacloprid, Chloropyrifos, Monocrotophos, Thiomethoxam, Triazophos, Acephate etc.
