Pesticides T. J. Sheets, David

Pimentel, 2012-12-06. Chemical pesticides continue as a point of major controversy in our society. Increasingly stringent regulatory actions on the part of state and federal agencies, exemplified by the RPAR Rebuttable Presumption Against Registration program of the Environmental Protection Agency, are supported by environmental groups and are generally opposed or viewed with skepticism by agriculturalists. The energy crisis invokes other questions on benefits of pesticides versus nonchemical controls and effects on labor utilization. As DDT and other persistent pesticides have been phased out, the more labile short lived chemicals have filled the voids in pest management systems and effects on nontarget species appear to have declined in recent years as the shift occurred. However, nagging questions of the hazard to man and other nontarget species from long term low level exposure to pesticides are frequently raised and recent suggestions that certain well known and long used chemicals cause cancer, increase sterility, and initiate or augment other deleterious effects in test animals have instilled a sense of caution and raised concern about the continued availability of some pesticides previously considered safe.

So the facade of concern and confusion continues This book is an outgrowth of a symposium at the meeting of the American Association for the Advancement of Science in February 1978 An introduction has been added and some of the papers have been modified since presentation Environmental Indicators for Agriculture Methods and Results Volume 3

Agricultural Chemicals and the Environment Ronald E. Hester, Roy M. Harrison, 1996 Enormous increases in agricultural productivity can properly be associated with the use of chemicals This statement applies equally to crop production through the use of fertilizers herbicides and pesticides as to livestock production and the associated use of drugs steroids and other growth accelerators There is however a dark side to this picture and it is important to balance the benefits which flow from the use of agricultural chemicals against their environmental impacts which sometimes are seriously disadvantageous Agricultural Chemicals and the Environment explores a variety of issues which currently are subject to wide ranging debate and are of concern not only to the scientific establishment and to students but also to farmers landowners managers legislators and to the general public

The Pesticide Question David Pimentel, Hugh Lehman, 2008-08-15 Pesticides have contributed impressively to our present day agricultural productivity but at the same time they are at the center of serious concerns about safety health and the environment Increasingly the public wonders whether the benefits of pesticides the perfect red apple outweigh the costs of environmental pollution human illness and the destruction of animals and our habitat Scientists and government officials are suspected of promoting commercial interests rather than protecting human welfare
