Edde, 2021-08-21 Field Crop Arthropod Pests of Economic Importance presents detailed descriptions of the biology and ecology of important arthropod pest of selected global field crops Standard management options for insect pest control on crops include biological non chemical and chemical approaches However because agricultural crops face a wide range of insect pests throughout the year it can prove difficult to

find a simple solution to insect pest control in many if not most cropping systems A whole farm or integrated pest management approach combines cultural natural and chemical controls to maintain insect pest populations below levels that cause economic damage to the crop This practice requires accurate species identification and thorough knowledge of the biology and ecology of the target organism Integration and effective use of various control components is often enhanced when the target organism is correctly identified and its biology and ecology are known This book provides a key resource toward that identification and understanding Students and professionals in agronomy insect detection and survey and economic entomology will find the book a valuable learning aid and resource tool Includes insect synonyms common names and geographic distribution Provides information on natural enemies Is thoroughly referenced for future research

**Insect Pest Management** A. Rami Horowitz, Isaac Ishaaya, 2013-04-17 In the middle of the twentieth century new insecticides were being constantly developed and it seemed that pesticides would be able to control insect pests indefinitely In fact from the 1950s to the 1980s pest control was mostly based on conventional insecticides such as organochlorines organo phosphates carbamates and pyrethroids However the severe adverse effects of pesticides on the environment the resistance problems reaching crisis proportions and public protests led to stricter regulations and legislation aimed at reducing the use of pesticides Consequently other ways to manage insects have been suggested such as the use of biorational pesticides with minimal adverse effects on the environment biological control host plant resistance to pests mating disruption with pheromones and cultural and physical control The ideas behind integrated control were published at the end of the 1950s by groups of entomologists from California and served as a basis for initiating integrated pest management IPM in the 1970s Since the 1980s insecticide resistant management IRM programs have been introduced as a result of increasing problems of resistance to pesticides IPM programs were strengthened as the awareness of environmental fragility intensified Since the late 1990s advanced approaches to manage insect pests have been developed One of the novel and exciting innovations in the study of plant resistance to pests has been the introduction of genetically engineered or transgenic plants
