His publications transformed the way art historians approach medieval art through his insightful integration of rhetoric, poetry, and non-canonical objects into the study of Byzantine art. His ground-breaking studies of Byzantine art that consider the natural world, magic, and imperial imagery, among other themes, have redefined the ways medieval art is interpreted. From notable monuments to small-scale and privately used objects, Maguire's work has guided a generation of scholars to new conclusions about the place of art and its function in Byzantium. In this volume, 23 of Henry Maguire's colleagues and friends have contributed papers in his honour, resulting in studies that reflect the broad range of his scholarly interests. *Writing Projects for Mathematics Courses*

Annalisa Crannell, Gavin LaRose, Thomas Ratliff, Elyn Rykken, 2004-12-31 *Writing Projects for Mathematics Courses* is a collection of writing projects suitable for a wide range of undergraduate mathematics courses, from a survey of mathematics to differential equations. The projects vary in their level of difficulty and in the mathematics that they require, but are similar in the mode of presentation and use of applications. Students see these problems as real in a way that textbook problems are not, even though many of the characters involved, e.g., dime store detectives and CEOs, are obviously fictional. The stories are sometimes fanciful and sometimes grounded in standard scientific applications, but the mere existence of the story draws the
